A New
Compendium
of the
Whole Art
of
Navigation
By
Wm Jones
I. Drapentier Sc.

A NEW

COMPENDIUM

Of the whole

ART

OF

PRACTICAL NAVIGATION;

CONTAINING

The Elements of *Plain Trigonometry*, and it's Application to *Plain*, *Mercator*'s and *Middle-Latitude Sailing*.

TOGETHER

With the moſt Uſeful and Neceſſary *Problems* in ASTRONOMY.

ALSO,

The Method of finding the *Variation of the Compaſs*, Working an *Obſervation*, the Reaſon and Uſe of the *Log-Line*, Allowances for *Lee-way*: With New Tables of the *Sun's Declination*, &c.

By *WILLIAM JONES*.

LONDON:

Printed by *J. Matthews* for *Jer. Seller* and *Char. Price*, at the *Hermitage-Stairs* in *Wapping*. Where you may be furniſhed with all ſorts of Mathematical and Sea Books, 1702.

The Symbols us'd in this Book.

+	Signifies	Addition.
−		Subtraction.
×		Mutiplication.
<		Lesser.
>		Greater.
=		Equality.
∨		Radicality.
Δ		Triangle.
⌐		Right-angle.
∠		Angle.
∠∠		Angles.
R		Radius.
T		Tangent.
ct		Co-tangent.
S		Sine.
cs		Co-sine.
~		Sum.
~		Difference.

MVSEVM BRITAN NICVM

6 C d

TO THE

Reverend and Learned

Mr. *John Harris* M.A.

AND

FELLOW

OF THE

ROYAL SOCIETY.

SIR,

THIS Treatise having been Composed under your Roof, attempted by your Encouragement, and Supervised and Corrected by your Friendly Care: I think my self obliged both by Justice and Gratitude to Devote it to You.

And I am very fond of this Opportunity, to pay you ſome poor Acknowledgment for the many Favours I have received from you, and the Advantages I have reapt from your free and generous Converſation; of which whoever is ſo happy as to partake, is always both Improved and Diverted. I will not tell you, Sir, the Senſe which all Ingenious and Studious Men have of the vaſt Benefit of your *Publick Mathematick Lectures*; Nor the Gratitude they owe to the *Generous Founder of them*, Charles Cox *Eſq*; : But this I muſt needs ſay, that I hope to ſee that moſt Noble and moſt Uſeful of all Sciences, *Mathematicks*, advanced by your help both to a much greater Extent and Improvement;

ment; and that all *Thinking* Men will at laſt be able to Diſtinguiſh between *nice* and *uſeleſs Speculations*, and *ſolid*, *ſubſtantial* and *profitable Learning*; and that they will purſue the latter with a Vigour and Diligence, as Eminent as is their Contempt of the former. I *am*,

SIR,

Your moſt obliged

humble Servant

William Jones.

TO THE READER:

I Am not Ignorant that there are many Treatiſes upon this Subject already Publiſh'd, yet moſt of theſe being either too Voluminous, whereby the Learner is deterred from attempting the Study, or too Abſtruſe and Perplexed, without any Regularity of Order and Method, whereby he is rather puzzled and confounded, than Inſtructed: As alſo moſt of theſe being filled with unneceſſary Problems, and intermixed with things Foreign to the the Art of Sailing; *I have induſtriouſly endea-*

To the Reader.

endeavour'd in this ſmall Book to obſerve a juſt mean: I have aimed to make the Method *throughout Uniform and Conciſe: To give all the* Caſes, *and ſuch only as are neceſſary and of uſe. The* Rules, Analogies, *manner of* Working *and* Reſolving *thoſe* Caſes, *I hope are explain'd in a Natural Order, in ſhort and clear Terms, and with proper Examples, which I doubt not will render them eaſie to the Underſtanding, and no way burthenome to the Memory; nor can I find that (reſpect being had to the deſigned Limits of the Book) there is any thing material omitted.*

You have here Collected into a ſmall compaſs, many very uſeful Things, not to ſay Improvements, which before lay ſcattered about in ſeveral Volumes:

Volumes. So that I preſume it will not be unacceptable to thoſe for whom 'twas principally intended.

In a Book of this ſmall Bulk, which I deſign purely for Practice, the Demonſtration of the Rules is not to be expected; Tho' 'tis pitty the Young Sailer ſhould be Defective in this Particular: For *a little* Geometry, *and the* Doctrine of the Sphere *(which is ſoon learnt from a good Maſter) will quickly ſet him Right in this moſt neceſſary Point; and which I am loth to ſuppoſe any Man that goes to Sea is Ignorant of.*

NAVI-

NAVIGATION.

CHAP. I.

Of Navigation in general.

NAVIGATION is the Conducting a Ship from one Place to another; and is either *Common* or *Proper*.

Common Navigation is Sailing in Sight of Land, or Coasting nigh Shoar: The Lead and Compass, with a competent Knowledge of the Lands, is what's chiefly required for the Performance thereof.

Proper Navigation is the Guiding a Ship to any Port desired: For the performing of which you have the Latitude, Log, and Compass.

The Latitude is most readily found by Instrumental Observations of some Celestial Bodies.

By the Log-line you have the Distance sail'd, for any time.

By the Compass you have the Course, or the Way the Ship sails.

Of these *Three* things any *Two* being given, then the Place the Ship is in, and how far she hath sail'd, and how far she hath to sail, and upon what Course to steer, is known at any time, and that *three* several

ways; *viz.* By *Plain Sailing*, *Mercator's* (or rather *Wright's*) *Sailing*, and Great *Circle Sailing*; all by Trigonometry.

But according to the design'd Brevity of this *Compendium*, we will only (in a plain, familiar Method) lay down the moſt uſeful *Problems* in *Plain* and *Mercator's* Sailing; as being more practical (but not more exact) than *Circle-Sailing*.

And becauſe it is impoſſible to give a *Theorem* that will reſolve all *Propoſitions*, or to ſet down all which may be of Uſe at ſometime or another; Therefore I thought it not improper (before we enter upon *Plain Sailing*) to deliver briefly the *Doctrine of Plain Triangles* fitted unto Practice; ſatisfying our ſelves with one Solution to each Caſe: All perform'd both *Logarithmetically* and *Inſtrumentally*; The one being certainly True and Eaſie, the other being the Readieſt, and Exact enough for common Practice.

And indeed whoſoever deſigns to make any Progreſs, or come to a Proficiency in any Mathematical Art, eſpecially *Navigation*, (which is none of the meaneſt of 'em,) ſhould be throughly acquainted with *Trigonometry*, it being the Foundation of all Inſtrumental Operations and Obſervations; and altogether *Axiomatically* True, and abſolutely Neceſſary for a *Navigator*.

The *Logarithms* are ſo univerſally known, and withal ſo eaſie, that I ſuppoſe no Learner that can add and ſubtract, can be ignorant of their Uſe; which may be perfectly obtain'd by Inſpection only.

To work a *Proportion* by 'em, take this

RULE.

Add the Logar. of the *ſecond* and *third*,
From the Sum ſubtr. the Log. of the *firſt*, } Term.
Remainder is the Logar. of the *fourth*

When

When the Radius is not the *first* Term, or is not mentioned in the Proportion; then to save the labour of Subtraction, observe this

RULE.

To the Arithmet. Comp. of Log. of *first*,
Add the Logarithms of *second* and *third*, } Term.
Sum, abating Rad. is Log. of the *fourth*

The Arithmetical Complement of a Logarithm, is only what it wants of 10.000000, or 20.000000; and is as easily set down with the Pen, as the Logarithm it self, by taking the Remainder of each Figure to 9, only that of the Right-hand to 10.

Also the Practitioner may readily and truly enough find the *fourth* Term, or Term required, in any Analogy or Proportion, by *Gunter*'s Scale, observing this

RULE.

The Extent of the Compass from the *first* to the { *second* / *third* } will reach from the { *third* / *second* } to the 4th. Term required.

NOTE.

If there be a Tangent in the Proportion, then the Radius is the Tangent of 45 *deg.* And when there is a Secant mention'd, the Operation cannot be perform'd by the Scale.

CHAP. II.

Of Plain Trigonometry.

Take a few Definitions, *relating to* Trigonometry, *which ſhould be perfectly underſtood, before you proceed to the* Rules *themſelves.*

1. A Plain Triangle is a Figure comprehended under 3 Right-lines deſcrib'd on a plain Surface.

2. An Angle is the Corner that is made by the meeting of two Lines.

3. If an Angle be {equal to / greater / leſſer} than {90°}, 'tis called a {Right / Obtuſe / Acute} Angle.

4. A Triangle is {either Right or Oblique} Angled; *i. e.*, having {one / no} Right Angle.

5. In a Right-angled Triangle {the Hypothenuſe is / the Legs are} the {the Side oppoſite to / Sides containing} the Right Angle.

6. In all plain Triangles, the Sum of the 3 Angles is equal to 180 Degrees.

7. Therefore in a plain Rectangled Triangle, one of the Acute Angles is the Complement of the other.

8. Therefore, in plain Rectangled Triangles, two Terms (one of 'em being a Side) ſerves to find a third.

9. In an Oblique-angled Triangle, any two Angles are equal to the Complement of the third Angle, to 180 Degrees.

10. There-

10. Therefore in an Oblique Triangle there muſt be three Terms given, and one of 'em a Side, to find a fourth.

CHAP. III.

Of Plain Rectangular Triangles.

Wherein there are ſeven Caſes, *all perform'd by the following* Axiom.

AXIOM I.

IN a Right-angled Triangle, If the Hypothenuſe be made the Radius of a Circle, each Leg will be the Sine of its oppoſite Angle.

But if the Leg be made the Radius of a Circle, the { Hypothenuſe / other Leg } will be the { Secant / Tangent } of the Angle oppoſite to the Leg made Radius.

CASE I.

Hypothenuſe and Angles given, either of the Legs required.

EXAMPLE.

Fig. I.

In $\triangle abc$, given $\left\{\begin{array}{l} bc = 446 \\ \angle c = 22^\circ\ 30' \end{array}\right\}$ req. ba, and ca.

PROPORTION.

$$\text{Rad.} : bc :: \left\{\begin{array}{l} s \\ cs \end{array}\right\} \angle c : \left\{\begin{array}{l} ba. \\ ca. \end{array}\right.$$

$$S, 90^\circ : 446 :: \left\{\begin{array}{l} s \\ cs \end{array}\right\} 22^\circ\ 30' \left\{\begin{array}{l} 168,\ 61 \\ 407,\ 6 \end{array}\right.$$

OPERA-

OPERATION.

To the Logar.	*bc* 446	2.644044
Add the Sine of Angle	*c* 22° 30′	9.582840
Sum, abat. Rad. = Log.	*ba* 168, 61	12.226884

By the Gunter's Scale.

The Extent from the Sine 90° } on the Line of
To S, ∠ *c* 22° 30′ } Sines,
Will reach from *bc* 446 } on the Line of
To *ba* 168, 61 } Numbers.

The Leg *ca*, is found by the same manner of working, according to the same Analogy.

CASE II.

One Leg and the Angles given, Hypothenuse required.

EXAMPLE.

In the △ *abc*, given { *ba* = 168° 61′ ; ∠ *c* = 22° 30′ } Req. *bc*,

PROPORTION.

S, ∠ *c* : *ba* :: Rad. : *bc*.

S, 22° 30′ : $168\frac{61}{100}$ :: S, 90° : 446

OPERA-

OPERATION.

To Ar. co. S, *L c*	22° 30′	0.417160
Add Logar. *b a*	168, 61	2.226884
Sum = Log. *b c*	446	2.644044

By the Gunter's *Scale.*

The Ext. from S, *L c* 22° 30′ } on the Line of Sines,
To S, 90 00 }
Will reach from *b a* 168, 61 } on the Line of Num-
To *b c* 446 } bers.

CASE III.

One Leg, and the Angles given, the other Leg required.

EXAMPLE.

In the △ *a b c*, given { *b a* = 168, 61 ; *L c* = 22° 30′ } required *c a*.

PROPORTION.

Rad. : *b a* :: ct, *L c* : *c a*.
T, 45° : 168, 61 :: T, 67° 30′ : 407, 6

OPERATION.

To Logar. *b a*	168, 61	2.226884
Add ct, *L c*	22° 30′	10.382776
Sum, — Rad. = Log. *c a*	407, 6	12.609660

By

By Gunter's *Scale.*

The Extent from T, 45° 00′ } on the } Tangents.
To T, 67 30 } Line of }

Will reach from 168, 61 } on the } Numbers.
To 407, 6 } Line of }

CASE IV.

One Leg, and the Hypothenuse given, the Angle required.

EXAMPLE.

In the △ *abc*, given { *bc* 446 ; *ba* 168,61 } required ∠ { *c* ; *b* }

PROPORTION.

∠ *c*? *bc* : Rad. :: *ba* : S, ∠ *c*.
446 : S, 90° :: 168 61 : S, 22° 30′.

OPERATION.

To Ar. co. Logar.	*bc* 446		7.355956
Add Logar.	*ba* 168,61		2.226884
Sum	S, ∠ *c*	22° 30′	9.582840
∠ *b*? From		90° 00	
Subtr.		22 30	
Remainder		67° 30′ = ∠ *b*	

By

By Gunter's *Scale.*

The Extent from	446	on the Line of
To	168, 61	Numbers,
Reaches from	S, 90° 00′	on the Line of
To the	S, 22 30	Sines.

CASE V.

One Leg, and Hypothenuse given; the other Leg required.

EXAMPLE.

In the △ *abc*; given { *bc* 446, *ba* 168, 61 } reqd. *ca*?

PROPORTION.

The Angles being found by the 4th Case.

Rad. : ct, ∠*c* :: *ba* : *ca*

T, 45° : T, 67, 30 :: 168,61 : 407,6

OPERATION.

To the	ct, ∠*c*	22° 30′	10.382776
Add the	Logar. *ba*	168,61	2.226884
Sum, — Rad. = Log. *ca*		407,6	12.609660

By Gunter's *Scale.*

The Extent from	T, 45° 00	on the Line of
To the	T, 67 30	Tangents,
Reaches from	168,61	on the Line of
To	407,6	Numbers.

ca, is also found by Natural Numbers, without finding the Angles, by this Equation,

$$ca = \sqrt{bc \times bc - ba \times ba}$$

CASE VI.

The Legs given; and the Angles required.

EXAMPLE.

In the $\triangle$ abc, given $\left\{\begin{matrix} ba, 168, 61 \\ ca, 407, 6 \end{matrix}\right\}$ requir'd $\angle \left\{\begin{matrix} c \\ b \end{matrix}\right.$

PROPORTION.

$ca : ba :: \text{Rad.} : \text{T}, \angle c$

$407, 6 : 168, 61 :: \text{T}, 45° : \text{T}, 22° 30'.$

OPERATION.

To Ar. co. Logar.	ca, 407, 6	7.390341
Add the Logar.	ba, 168, 61	2.226884
Sum = T,	$\angle c$, 22° 30′	9.617225

By Gunter's *Scale.*

The Extent from	407, 6	on the Line of
To	168, 61	Numbers,
Reaches from	T, 45° 00′	on the Line of
To the	T, 22 30	Tangents.

CASE VII.

The Legs given; the Hypothenuse required.

EX-

EXAMPLE.

In the $\triangle$ *a b c*, given $\left\{\begin{matrix} a\,c, & 407,6 \\ a\,b, & 188,61 \end{matrix}\right\}$ required *b c*.

PROPORTION.

The Angles being found by the 6th Caſe.

S, $\angle$ *b* : Rad. :: *a c* : *b c*.

S, 67° 30′ : S, 90° :: 407, 6 : 446

OPERATION.

To Ar. co.	S, $\angle$ *b*, 67° 30′	0.034385
Add Logar.	*a c*, 407, 6	2.609659
Sum = Logar.	*b c*, 446	2.644044

By Gunter's *Scale.*

The Extent from	S, 67° 30′	on the Line of
To the	S, 90 00	Sines,
Reaches from	407, 6	on the Line of
To	446	Numbers.

b c, may be found, without working for the Angles, by this Equation;

$$b\,c = \sqrt[2]{\overline{b\,a \times b\,a} + \overline{c\,a \times c\,a}}$$

CHAP. IV.

Of Oblique-Angled Plain Triangles.

Wherein there are six Cases; *and all resolved by the* three *following* Axioms.

Axiom II.

IN all Plain Triangles, the Sides are proportional to the Sines of their oppoſite Angles.

Axiom III.

In all Plain Triangles,

As the Sum of the Legs of any Angle,
Is to their Difference;
So is the Tangent of half the Sum of their oppoſite Angles.
To the Tangent of half their Difference.

Axiom IV.

As the Baſe, or longeſt Side,
Is to the Sum of the other Sides;
So is the Difference of thoſe Sides,
To the Difference of the Segments of the Baſe.

CASE I.

Two Sides, and an Angle oppoſite to one of 'em given; the Angle oppoſite to the other required.

If the Angle given be { Obtuſe, / Acute, and oppoſite to the greater Side, } the Angle required is Acute,

But

But if the given Angle be Acute, and Oppoſite to the leſſer ſide, the requir'd Angle is Ambiguous; that is, not to be known from the 3 given things, whether 'tis Acute or Obtuſe; but is ſoon determin'd by laying your *Data* down by Scale and Compaſs, which ſhould be always perform'd before Operation.

EXAMPLE. *Fig.* II.

In $\triangle bcd$, given $\left\{\begin{matrix} cd & 139 \\ cb & 64 \\ \angle d & 22^\circ\ 30' \end{matrix}\right\}$ required Acute $\angle b$.

PROPORTION.

per Ax. 2.

$cb : S, \angle d :: cd : S, \angle b$

$64 : S, 22^\circ\ 30' :: 139 : S, 56^\circ\ 15'$

OPERATION.

To Ar. co. Logar.	cb 64	-	8.193820
Add the Log.	cd. 139		2.143142
S,	$\angle d$ 22° 30′		9.582840
Sum, =	S, $\angle b$, 56° 15′		19.919802

By Gunter's *Scale.*

The Extent from 64 } on the Line of
To 139 } Numbers,
Reaches from S, 22° 30′ } on the Line of
To S, 56 15 } Sines.

CASE. II.

Two Sides, and an Angle oppoſite to one of 'em given; the third Side required.

EXAM.

EXAMPLE.

In Obl. $\triangle b\,c\,d$, given $\left\{\begin{matrix} c\,d & 139 \\ c\,b & 64 \\ \angle d & 22^\circ\ 30' \end{matrix}\right\}$ required $d\,b$.

Preparation.

By $\left\{\begin{matrix} \text{Case 1.} \\ \text{9. Chap. 2.} \end{matrix}\right\}$ find the Angle $\left\{\begin{matrix} b & 56^\circ\ 15' \\ c & 101\ \ 15 \end{matrix}\right\}$

PROPORTION.

per Ax. 2.

S, $\angle\,b$: $c\,d$ :: S, $\angle\,c$: $b\,d$

S, $56^\circ\ 15'$: 139 :: S, $101^\circ\ 15'$: 164

OPERATION.

To Ar. co.	S, $\angle\,b$ $56^\circ\ 15'$	0.080154
Add the	Log. $c\,d$ 139	2.143142
	S, $\angle\,c$ $101^\circ\ 15'$	9.991574
Sum. =	Log. $b\,d$ 164	12.214870

By Gunter's *Scale.*

The Extent from S, $56^\circ\ 15'$ } on the Line of
To the S, 78 45 } Sines,
Reaches from 139 } on the Line of
To 146 } Numbers.

CASE. III.

Two Angles, and a Side given; the other Side required.

EXAM-

EXAMPLE.

In Obl. $\triangle b c d$, given $\left\{ \begin{array}{l} \angle \left\{ \begin{array}{l} c, 101^\circ\ 15' \\ d, 22\ 30 \end{array} \right. \\ c b, 64 \end{array} \right.$ reqd. $\left\{ \begin{array}{l} b d \\ c d \end{array} \right.$

PROPORTION.

per Ax. 2.

S, $\angle d$: $c b$ :: S, $\angle c$: $b d$
S, 22° 30′ : 64 :: S, 101° 15′ : 164

OPERATION.

To Ar. co.	S, $\angle d$ 22° 30′	0.417160
Add the	S, $\angle c$ 101, 15	9.991574
	Log. $c b$ 64	1.806180
Sum =	Log. $b d$ 164	12.214914

By Gunter's *Scale.*

The Extent from	S, 22° 30′	on the Line of
To	S, 101, 15	Sines,
Reaches from	64	on the Line of
To	164	Numbers.

NOTE.

That the Sine of 101° 15′, is the Sine of its Complement to 180 *deg.*

$c d$? PROPORTION.

S, $\angle d$: S, $\angle b$ :: $c b$: $c d$
S, 22° 30′ : S, 56° 15′ :: 64 : 139

CASE

CASE IV.

Two Sides, and the Angle comprehended by them, given; the other Angles required.

EXAMPLE.

In obl. $\triangle$ *b c d*, given $\left\{\begin{array}{ll} \angle c, & 101^\circ\ 15' \\ c b, & 64 \\ c d, & 139 \end{array}\right.$ required $\left\{\begin{array}{l} \angle d \\ \angle b \end{array}\right.$

Preparation, by *Axiom* 3

$$c d = 139$$
$$c b = 64$$

$$\text{Sum} = c d + c b = 203$$

$$\text{Differ.}\quad c d - c b = 75$$

From	180°	00′	= 3 $\angle\angle$ of a $\triangle$,
Subtract	101	15	= the given $\angle$,
Remain.	= 78	45	= π
$\frac{1}{2}$ Remain.	= 39	$22\frac{1}{2}$	= $\frac{1}{2}\pi$ } oppos. $\angle\angle$.

PROPORTION.

By Axiom 3.

$$c b + c b : c d - c b :: \mathrm{T}, \tfrac{1}{2}\pi \angle\angle : \mathrm{T}, \tfrac{1}{2}\pi \times \angle\angle.$$
$$203 : 75 :: \mathrm{T},\ 39^\circ\ 22'\tfrac{1}{2} :: \mathrm{T},\ 16^\circ\ 52'\tfrac{1}{2}.$$

OPERATION.

To Ar. co. Log. $cd + cb$ 203 7.692504

Add Log. $cd - cb$ 75 1.875061

$T, \frac{1}{2}$ Sum $\angle\angle b \& d$ 39° 22′ 9.914172

Sum, $=$ $T, \frac{1}{2}$ Diff. 16 52 9.481737

$\frac{1}{2}$ Sum $+$ $\frac{1}{2}$ Diff. $\angle\angle$ $=$ $56\ 15 = \angle B$ / $22\ 30 = \angle d$

CASE V.

Two Sides, and the Angle comprehended given; the third Side required.

EXAMPLE.

In Obl. $\triangle bcd$, given cb 84, cd 139, $\angle d$ 101° 15′ required bd.

Preparation.

Find the Angles b, d, by Case 4th.

PROPORTION.

per Ax. 2.

S, $\angle b$: cd :: S, $\angle c$: bd.

S, 56° 15′ : 139 :: S, 101° 15′ : 164.

The *Operation* is the same with Case 2d.

CASE VI.

Three Sides given; Angles required.

Fig. III. EXAMPLE.

In the Obl. Δ *b c d*, given $\left\{\begin{matrix} b\,d = 105 \\ c\,d = 70 \\ c\,b = 50 \end{matrix}\right\}$ Req. Angles.

Preparation, by *Axiom* 4.

From the Vertical Angle, upon the base ——— *b d*
Let fall the Perpendicular ——— ——— *c a*
Then the $\left\{\begin{matrix} \text{whole } \Delta, \\ \text{Base,} \end{matrix}\right\}$ $\left\{\begin{matrix} \text{is divided into 2} \\ \text{Segments.} \end{matrix}\right\}$ $\left\{\begin{matrix} \text{Δs. } c\,a\,d,\ c\,a\,b \\ a\,d,\ a\,b \end{matrix}\right\}$

$c\,d = 70$
$c\,b = 50$

Sum, $= c\,d + c\,b = 120$

Diff. $= c\,d - c\,b = 20$

PROPORTION.

By Axiom 4.

$$\overline{d\,b} : \overline{c\,d + c\,b} :: \overline{c\,d - c\,b} : \overline{d\,f = d\,a - b\,a}$$

105 : 120 :: 20 : 22,8

OPERATION.

To Ar. co. Log.	$b\,d = 105$	8.978811
Add Log.	$c\,d + c\,b = 120$	1.079181
	$c\,d - c\,b = 20$	0.301030
Sum, = Log.	$d\,f$ 22,8	10.359022

By

By Gunter's *Scale.*

The Extent from ——— 105
To ——— ——— 120 } on the Line of
Will reach from ——— 20 } Numbers.
To ——— ——— 22,8

bd = 105 = Base.
fd = 22,8 = Differ. Segments.

Sum, = 127,8 } its $\frac{1}{2}$ { 63,9 = da = < } Segment.
Diff. = 82,15 } { 41,7 = ba = > }

Then the Angles are found by Case 4th of Right-Angled Triangles.

PROPORTION.

In $\triangle cab$, { cb: Rad. :: ab : S, $\angle c$
{ 50 : S, 90° :: 41,7 : S, 56° 30′

In $\triangle cdb$, { cd : Rad. :: cd : S, $\angle c$
{ 70 : S, 90° :: 63,9 : S, 65° 6′

From 90° 00′
Subt. 56, 30

Rem. = 33, 30 = $\angle b$

From 90° 00′
Subt. 65, 06

Rem. = 24, 54 = $\angle d$

To 56° 30′
Add 65, 06

Sum, = 121, 36 = $\angle c$, in $\triangle bcd$.

CHAP. V.

Definitions and Rules relating to Plain *and* Mercator's *Sailing.*

1. *Latitude*, is the distance of a Ship, or Place from the Equinoctial, South or North, counted on the *Meridian.*

Therefore a Ship Sailing { towards / from } the Equinoctial { depresses / raises } the Pole.

2. *Difference of Latitude* is the neareſt Diſtance of any two Places (or Parallels of Lat.) ſhewing how far one of them is to the Southward, or Northward of the other, and is never above 180 Degrees; for the finding of it, obſerve this

RULE.

If the Places are on the { ſame / contrary } ſide of the Equator, their { Difference / Sum } is the *Difference of Latitude* required.

EXAMPLE I.

Required the Difference of Latitude between the Lizard *and* Port Royal?

From Subt.	the Latitude of *Lizard*	50° 00′	N.
	Port Royal	17, 45	
Rem. = *Difference of Latitude*		32, 15	

EXAM.

EXAMPLE II.

Required the Difference of Latitude between C. Blanco *and C. St.* Auguſtine.

To	the Latitude of	C. *Blanco*	20° 00′ N.
Add		C. St. *Auguſtine*	8, 10 S.
Sum = *Difference of Latitude*			28, 10

3. *Difference of Latitude, and Latitude departed from,* being given; the Latitude the Ship is in, is found by the following Rule, wherein there is two Caſes.

CASE I.

Sailing { North- / South- } ward, in { North / South } Latitude, their Sum is the Latitude Required.

CASE II.

Sailing { North- / South- } ward, in { South / North } Latitude, their Difference is the Latitude Required, of the ſame Name with the Greater.

EXAMPLE I.

Suppoſe from 20° 00′ *North Latitude, a Ship Sails Northward, till the Difference of Latitude be* 30° 00′; *I demand the Latitude ſhe is in?*

To the Departed	Latitude	20° 00′ N.	
Add the Difference		30 00	Northerly
Sum is the Reqd.		50 00 N.	

EXAM-

EXAMPLE II.

If from the Latitude of 40° 30′ *North, a Ship Sails Southward, till the Difference of Latitude be* 25° 00′; *what Latitude is she in?*

From the Departed	Latitude	40° 30′	N.
Subtr. the Difference		25 00	Southerly
Rem. is the Required		15 30	N.

EXAMPLE III.

If from the Latitude of 40° 00′ *North, a Ship Sails Southerly, till the Difference of Latitude be* 58° 00′; *what Latitude is she in?*

From the Difference	Latitude	58° 00′	Southerly
Subtr. the Departed		40 30	N.
Rem. = Required		17 30	S.

4. *Longitude*, is the East or West Distance of a Ship or Place from some fixed *Meridian*; and is reckoned in {the Plain / *Mercator's*} Chart, on the {Parallel of Lat. / Equinoctial}; and may be counted increasing Eastward, till it end where it first began. Or rather increasing both Easterly and Westerly, till it end in the opposite *Meridian*.

5. *Difference of Longitude* {on the Plain / on *Mercator's*} Chart, is the Distance between any two *Meridians* reckon'd on the {Parallel of Latitude, / Equinoctial,} shewing how far {one / the} Place {—— / *Meridian* of one Place} is to the Eastward or Westward of {another. / the *Meridian* of another.}

6. *The Compass* is a Circle (representing the Horizon) divided into *East*, *West*, *South* and *North* Quadrants,

drants, and each Quadrant into eight Parts, called *Rhombs* or *Points of the Compass*, containing 11° 15′ each.

Consequently the Radius or 90° = 8 Points, and 180° or the Sum of 3 Angles in a Plain Triangle, is equal to 16 Points, and so the whole Circle or 360° = 32 Points; one *Degree* on any great Circle is equal to 20 Leagues, equal to 60 Minutes or Miles, each Mile = 6000 Foot.

7. *A Rhomb-Line* is the *Line of the Ships way*, Steer'd by the Compass, making with every *Meridian* equal Angles.

8. The *Course* is the Angle between the *Rhomb-Line* and the *Meridian*.

CHAP. VI.

Of Plain Sailing.

PART I.

Being the Application of the Doctrine of Plain Rectangular Trigonometry, *to a single* Course.

PROBLEM I.

Given, *Course and Distance*;
Reqd. *Departure, and Difference of Latitude?*

EXAMPLE.

A Ship from Lat. 50° 10′ North, runs S. S. W. 440 Miles; what is her *Departure*, and present *Latitude?*

EXPLA-

Fig. I. EXPLANATION.

In Δ *a b c*, given { *c b* (point Steer'd on) dist. run 446; *L c* Angle of the Ships Course 22° 30′; *L b* Compl. of Course 67 30 } reqd. { *c a* (*Meridian*) *diff. of Lat.*; *b a* (Parallel of Lat.) *Departure.*

PROPORTION.

By Case 1. of Right Angled Triangles.

Radius : Dist. :: S, Course : Depart.

S, { 90° 00′ / 8 Points } : 446 :: S, { 22° 30′ / 2 Points } : 168 61

OPERATION.

To the	Log. *Distance*	446 Miles	2.644044
Add the	Sine *Course*	22° 30′	9.582840
Sum, — Rad. =	Log. *Departure*	168,61	12.226884

By Gunter's *Scale.*

The Extent from the S, *Rad.* or S, 8 P. } on the Line of
To the S, *Course* S, 2 P. } S, Points.

Will reach from *Dist.* 446 } on the Line of
To the *Departure* 168, 61 } Numbers.

Diff. of Lat. reqd.

PROPORTION.

Radius : Distance :: c s, Course : Diff. Lat.

S, 8 Points : 446 Miles :: S, 6 Points : 407

OPE-

OPERATION.

To the	Log. Dist.	446	2.644044
Add the	c. Sine, Course	20° 33′	9.965615
Sum, — Rad. = Log. Diff. Lat.		407	2.609659

By Gunter's *Scale.*

The Extent from ——— S, 8 P. } on the Line of
To the ——— S, 6 P. } S, Points.
Reaches from ——— 446 } on the Line of
To ——— ——— 407 } Numbers.

Present Lat. what?

From the Departed } Lat.	50° 10′	North.
Subt. Difference of }	6, 47 = 407′	
Rem. is the present. Lat.	43, 23	North.

PROBLEM II.

Given, *Course and Difference of Latitude;*
Reqd. *Departure and Distance run?*

EXAMPLE.

A Ship Sailing N. N. W. from the Lat. 4° 34′ North, till she is in Lat. 2° 13′; what is her *Departure* and *Distance?*

Preparation.

To the Departed }	Lat.	4° 34′	North.
Add the Observed }		2, 13	South.
Sum, = Differ. of		6, 47 = 407′	

Departure?

PROPORTION.

By Case 3. of Right-angled Triangles

Radius	: Diff. Lat.	:: T, Course	: Depar.
T, 45° 4 Points	: 407	:: T, 22° 30′ 2 Points	: 168,6

OPERATION.

To the	Log. *diff. Lat.* 407	2.609659
Add the	Tang. *Course* 22° 30′	9.617224
Sum,— Rad. = Log. *Depar.* 168,61		2.226883

By Gunter's *Scale.*

The Extent from the	T, 4 P.	on the Line of
To the	T, 2 P.	S, Points.
Reaches from	407,	on the Line of
To	168,6	Numbers,

Distance run?

PROPORTION.

By Case 2. of Right-angled Triangles.

cs, Course	: Diff. Lat.	:: Rad.	: Distance.
S, 6 Points	: 407	:: S, 8 P.	: 446

OPERATION.

To Ar. co. cs, Course.	22° 30′	0.034385
Add Logar. Diff. Lat.	407,00	2.609659
Sum, = Logar. Distance.	446	2.644044

By Gunter's *Scale.*

The Extent from	S, 6 P.	}	on the Line of
To the	S, 8 P.	}	S, Points.
Reaches from	407	}	on the Line of
To	446	}	Numbers.

PROBLEM III.

Given, *Course and Departure*;
Reqd. *Distance and Difference of Latitude?*

EXAMPLE.

A Ship Sailing N. N. W. from Latitude 2° 13′ South, till the Departure be 168,6 Miles, what is her *Distance run*, and present *Latitude?*

Distance run?

PROPORTION.

By Case 2. Right-angled Triangles.

S, Course : Departure :: Radius : Distance.
S, 2 P. : 168,61 :: S, 8 P. : 446

OPERATION.

To Ar. co. S, Course	22°	30′	0.417160
Add the Log. Depart.	168,	61	2.226884
Sum, = Log. Dist. run	446		2.644044

By Gunter's *Scale.*

The Extent from ——— S, 2 P. } on the Line of
To the ——— S, 8 P. } S, Points.
Reaches from 168, 61 } on the Line of
To 446 } Numbers.

Differ. of Latitude?

PROPORTION.

By Case 3. of Right-angled Triangles.

S, Course : Departure :: cs, Course : Diff. Lat.
S, 2 Points : 168, 61 :: S, 6 Points : 407, 06

OPERATION.

To Ar. co.	S, Course	22° 30′	0.417160
Add the	Log. Depart.	168, 61	2.226884
	cs, Course	20° 30′	9.965615
Sum,—Rad.=Log. Diff. Lat.		407, 06	2.609659

By Gunter's *Scale.*

Extent from S, Course 2 P. } on the Line of
To the S, Course 6 P. } S, Points.
Reaches from Depart. 168, 61 } on the Line of
To Diff. Lat. 407, } Numbers.

Present Latitude?

From Difference of Lat. 6° 47′ = 407
Subtr. the Departed from Lat. 2, 13 = South
Rem. is the Present Lat. 4, 34 North.

PRO-

PROBLEM IV.

Given, *Diſtance and Diff. Latitude*;
Reqd. *Courſe and Departure?*

EXAMPLE.

A Ship Sails from Lat. 3° 10′ North, between South and Weſt, till ſhe is in Lat. 9° 57′ North, her *Courſe* and *Departure* is reqd.

Preparation.

From the Obſerved } Lat. { 9° 57′ } North.
Subtr. the Departed } Lat. { 3, 10 } North.

Rem. = Difference } { 6, 47 = 407 *Miles.*

Courſe?

PROPORTION.

Diſtance : Radius :: Diff. Lat. : c s, Courſe.
446 : S, 8 P. :: 407 : S, 6 P,

OPERATION.

To Ar. co. Log. Diſt.	446	7.355956
Add the Log. Diff. Lat.	407	2.609659
Sum, = c s, Courſe, 22° 30′		9.965615

By Gunter's *Scale.*

The Extent from Diſt. 446 } on the Line of
To the Diff. Lat. 407 } Numbers.
Reaches from S, 8 P. } on the Line of
To c s, Courſe, or S, 6 P. } S, Points.

Departure?

Departure?

PROPORTION.

Radius : Diſtance :: S, Courſe ; Depart.
S, 8 P : 446 :: S, 2 P. ; 168, 6.

OPERATION.

To the Log. Diſtance run 446 ——— 2.644044
Add the S, Courſe 22° 30′ ——— 9.582840

Sum, — Rad. = Log. Depart. 168, 6 —— 2.226884

By Gunter's *Scale.*

The Extent from S, Rad. 8 P. } on the Line of
To S, Courſe ——— 2 P. } S, Points.
Reaches from Diſt. ——— 446 } on the Line of
To the Departure 168, 6 } Numbers.

PROBLEM V.

Given, *Diſtance run, and Departure*;
Reqd. *Courſe and Diff. of Latitude?*

EXAMPLE.

A Ship runs 446 Miles between South and Weſt, till her Departure be 168, 61 Miles; required the *Courſe Steer'd upon*, and the *Difference of Latitude?*

Courſe?

PROPORTION.

Diſtance ; Radius :: Depart. ; Courſe.
446 : S, 8 P. :: 168, 6 : S, 2 P.

OPERATION.

To Ar. co. Log. Diſt.	446	7.355956
Add the Log. Depart.	168,61	2.226884
Sum, = Sine Courſe	22° 30′	9.582840

By Gunter's *Scale.*

The Extent from Diſt.	446	on the Line of
To the Departure	168,6	Numbers.
Reaches from S, Rad.	8 P.	on the Line of
To the S, Courſe	2 P.	S, Points.

Different Latitude?

PROPORTION.

Radius : Diſtance :: cs, Courſe : Diff. Lat.

S, 8 P. : 446 :: S, 6 P : 407

OPERATION.

To Log. Diſtance	446	2.644044
Add the cs, Courſe	22° 30′	9.965615
Sum, — Rad. = Log. Diff. Lat.	407	2.609659

By Gunter's *Scale.*

The Extent from S, Rad.	8 P.	on the Line of
To the cs, Courſe	6 P.	S, Points.
Reaches from Diſtance	446	on the Line of
To the Diff. Lat.	407	Numbers.

PRO-

PROBLEM VI.

Given, *Different Latitude and Departure*;
Reqd. *Course and Distance run?*

EXAMPLE.

A Ship's { Southing / Westing } being { 407, 67 / 168, 61 } Miles;

Her *Course* and *Distance* is required.

PROPORTION.

Diff. Lat. : Depart. :: Radius : T, Course.
407 : 168, 61 :: S, 4 P. : T, 2 P.

OPERATION.

To Ar. co. Log. Diff. Lat.	407 ——	7.390341
Add the Log. Departure	168, 61 ——	2.226884
Sum, = Tangent Course	22° 30′ ——	9.617225

By Gunter's *Scale:*

The Extent from Diff. Lat.	407	on the Line of
To the Departure ——	168, 6	Numbers.
Reaches from T, Rad. ——	4 P.	on the Line of
To the T, Course ——	2 P.	S, Points.

Distance?

Diſtance run?

PROPORTION.

By Caſe 2.

S, Courſe : Depart. :: Radius : Diſtance.
S, 2, P. : 168, 6 :: S, 8 P. : 446

OPERATION.

To Ar. co. S, Courſe 22° 30′	0.417160
Add the Log. Depart. 168, 6	2.226884
Sum, = Log. Diſtance 446	2.644044

By Gunter's *Scale.*

The Extent from S, Courſe —— 2 P. } on the Line of
To the S, Radius —— 8 P. } S, Points.
Reaches from Depart. —— 168, 6 } on the Line of
To the Diſtance run —— 446 } Numbers.

F CHAP.

CHAP. VII.

Of Plain Sailing.

PART II.

Being the Application of the Doctrine of Plain Rectangular Trigonometry *to a* Compound Course.

A *Compound Course*, or a *Traverse*, is when a Ship, upon the ſhifting of Wind, Sails upon ſeveral Courſes in the ſpace of 24 Hours, *&c.*

Reſolving a Traverſe, is the reducing of theſe Courſes, found by the Compaſs; and Diſtances, found by the Log, into one Courſe and Diſtance.

NOTE.

In Sailing by or againſt a Wind, there ſhould be an allowance for Leeward Way, and that according to the Mould of the Ship, the Sail ſhe bears, the Growth of the Sea, *&c.*

EXAMPLE.

A Ship being bound to a certain Port, and meeting with contrary Wind, Sails VV. by S. 80 *Leagues, then N.* 40 *Leagues, S. S. E.* 70 *Leagues, E.* 64 *Leagues, then N. VV. by N.* 86 *Leagues, laſtly N. E. by E.* 50 *Leagues; I demand the* Difference *of* Latitude, Departure, Direct Courſe, *and* Diſtance?

First, *Courſe* = 7. P. = 78° 45′
Diſtance = 80.

Differnce

Difference of Latitude what?

By *Problem* 1, of Plain Sailing.

OPERATION.

To the Logar. Dist.	80	1.903090
Add cs, *Course*	78° 45′	9.290236
Sum,—Rad.=Log. *Diff. Lat.* 15,6		1.193326

Departure, what?

OPERATION.

To the Log. *Distance*	80	1.903090
Add the Sine *Course*	78° 45′	9.991574
Sum,— Rad. = Log. *Departure* 78,5		1.894664

By the same method, the *Diff. Lat.* and *Departure* for each *Course* and *Distance* may be found, then placed in a Table by observing this

RULE.

Course N { East / West } erly, the *Diff. Lat.* is Northing and *Depart.* { East / West } ing.

Course S. { East / West } erly, the *Diff. Lat.* is Southing, and *Depart.* { East / West } ing.

Then,

Adding up { North / West } ing and { South / West } ing; their Difference is the { *Diff. Lat.* / *Departure.* }

				Diff.	Lat.	Departure.	
	Courſes.	P.	Diſt.	South.	North.	Eaſt.	Weſt.
1	W. by S.	7	80	15,6			78,5
2	N.	0	40		40,0		
3	S.S.E.	2	70	64,7		26,8	
4	E.	8	64			64,0	
5	N.W. by N.	3	86		71,5		47,8
6	N. E. by E.	5	50		27,3	41,6	
			Sum'd 80, 3		139,3	132,4	126,3
			Subtracted.		80,3	126,3	
			Diff. Lat. Northerly		59	6, 1 Dep. E.ly	

Then with the *Diff. Lat.* and *Departure*; find the direct *Courſe* and *Diſtance*, by Prob. 6. Plain Sailing.

Courſe what?

OPERATION.

To Ar. co. Log. *Diff. Lat.*	59	8.229148
Add the Log. *Departure*	6, 1.	0.785330
Sum = T, *Courſe*	5°, 54′	9.014478

Diſtance what?

OPERATION.

To Ar. co. S. *Courſe*,	5°, 54′	0.002307
Add the Log. *Diff. Lat.*	59	1.770852
Sum = Log. *Diſtance*,	59, 31	1.773159

After this manner any *Tranſverſe* may be work'd, either by the *Logarithms*, *Gunter's Scale*, or *Traverſe-Table*; all being to the ſame effect, as grounded upon the ſame Principles.

CHAP.

CHAP. VIII.

Plain Sailing.

PART. III.

Being the application of the Doctrine of Oblique Angled Plain-Trigonometry, *to* Plain-Sailing.

PROBLEM I.

TWO Ports under the ſame Meridian, from the Southermoſt, a Ship ſails N.N.W. 139 *miles, from the Northermoſt, another Sails* S. W. *by* W. *till ſhe meets the firſt; what's the* Diſtance of theſe Ports, *and the* Diſtance ſail'd by the 2d. Ship?

Fig. II. In $\Delta\ b\ c\ d$. giv. d = 1ſt. *Ship's Courſe.* 22°,30′ = 2P. b = 2d. *Courſe.* 56, 15 = 5P. cd = 1ſt. *Ship's Diſt.* 139 *miles*. req. cb = 2d. *Diſt.* bd = *diſtance of the Ports.*

Diſt of the Ports what?

PROPORTION.

by Caſe 3d. of Obl. Triangles.

S, $L\ b$: $d\ c$ :: S, $L\ c$: $b\ d$
S, 5 P. : 139 :: S, 9 P : 164 = Diſt. Ports.

To Ar. co. S, $L\ b$,	——	56°, 15′	0.080145
Add the Log. $d\ c$	——	139	2.143142

PROBLEM III.

Two Ships, one ſails S. E. *by* S. 64 *min. the other ſails*, S. S.W. 139 *min.*; *I demand their* Bearing and Diſtance?

In $\triangle b c d$ { giv. { $b c = 64 =$ 1*ſt.* ; $d c = 139 =$ 2*d.* } *Ship's Diſtance.* ; req. { $b d =$ *Bearing* and *Diſtance.*

Their Bearing what?

PROPORTION.

by Caſe 4, *Obl. Triangles.*

$c d + c b : c d - c b :: T, \frac{1}{2} \sim L L : T, \frac{1}{2} \times L L.$
203 : 75 :: T, 39°, 22′ ½ : T, 16°, 52′ ½
16, 52 ½

$\frac{1}{2} \sim \{+,-\} \frac{1}{2} \times L L = \{56, 15 = <, 22, 30 = >\} L \{b, d\}$

To S. E. by E. = 56°, 15′ = 5 P.
Add S. E. by S. = 33, 45 = 3 P.

Sum = E or W, = 90, 00 = 8 P. the *Courſe* required.

Diſtance what?

PROPORTION.

by Caſe 5 of Obl. Triangles.

S, ∠ *b* : *cd* : : S, ∠ *c* : *bd*.
S, 5P : 139 : : S, 9P : 164.

Operation is the ſame with that of *Probl.* 1.

PROBLEM IV.

Having ſailed N. W. 64 *Leagues, then by contrary Wind, was carried South-weſterly* 139 *Leagues, but the Storm continuing, forc'd us back* 164 *Leagues to the place from whence we came; I demand* the ſecond and laſt Courſe?

In △ *bcd* { *b*, *the place ſailed from.* / *bc* = 64 = 1ſt. / *dc* = 139 = 2d. / *bd* = 164 = 3d. } *Courſe and Diſtance.*

Preparation.

by Caſe 6, *of Obl. Triangles.*

db : *cd* + *cb* : : *cd* − *cb* : *df* = *da* − *ba*
164, 01 : 203 : : 75 : 92, 8
92, 8

$\left.\begin{matrix} r = 256,8 \\ \hline s = 71,2 \end{matrix}\right\}^{\frac{1}{2}} = \left\{\begin{matrix} 128,4 = da = < \\ 35,6 = ba = > \end{matrix}\right\}$ Seg.

Angles

Angles are found by this Proportion.

In △ *abc* *bb* : Rad : : *ab* : cs, ∠ *b*
∠ *c*? 64 : S, 90°: : 35, 5 : S, 33°, 45′

Operation by *Gunter's Scale.*

The Extent from ——— 64 } on the Line of
To ——— 35, 5 } S, Points.
Reaches from ——— S, 90°, 00′ } on the Line of
To ——— S, 33, 45 } Numbers,
90, 00

56, 15 = ∠ *b*

To ——— N. W. = 45°, 00′
Add ——— 56, 15

Sum = ——— 101°, 15′ = { N / S } Weſtrly { 101°, 15′ / 78, 45

Therefore the laſt Courſe was E. by N.

In △ *acd* *cd* : Rad. : : *da* : cS, ∠ *d*
∠ *d* ? 139 : S, 90 : : 128, 4 : S, 67°, 30′

Operation by Gunter's *Scale.*

The Extent from ——— 139 } on the Line of
To the ——— 128, 4 } Numbers.
Reaches from ——— S, 90°,00′ } on the Line of
To ——— ——— S, 67, 30 } Sines.

22, 30 = *L d*

From S, Westerly ——— 78°, 45′
Subst. ——— ——— ——— 22, 30

Rem. = *second Course* = 56, 15 = S. W by W.

Geogra-

Geographical Problems

Useful in

Mercator's Sailing.

PROBLEM I.

Given the Latitude of two Places; Required the Meridional Diff. of Latitude between those Places.

THE Solution of this Problem is here perform'd both by the Table of *Merid. Parts* and by the Table of *Log. Tangents*; the one being the certain Proof of the other. In working by the Table of *Merid. Parts*, observe this general

RULE.

Diff. } of the *Merid. Parts* in *Latitudes* of { the same } kind, is the *Meridional Difference of Latitude* required.
Sum } { Different }

EXAM-

EXAMPLE.

In Latitudes of the same kind, (both North or both South;) suppose Lizard and Madera; *their* Merid. Diff. of Latitude *is required.*

From 3490 } *Merid. Parts*, is Lat. { *Liz.* 50°, 10′ } N.
Subst. 2058 } { *Mad.* 32, 25 }

Rem. 1432 = *Merid. Diff. of Lat.* required.

By the *Log. Tangents.*

RULE.

The diff. of the *Tangents* (or *Co-tangents*) of ½ the *Co-latitudes* divided by 1263, is equal to the *Merid. Diff. of Lat.* in Minutes.

EXAMPLE.

Lat. { *Liz.* 50°, 10′ } ½ *Co-lat.* = { 19°, 55′. 9.559097
{ *Mad.* 32, 25 } { 28, 47½. 9.740019

diff. = 180922

1263) 180922 . (1432. = *Merid. Diff. of Lat.*
546. . .
410.
313.

EXAM-

EXAMPLE II.

If one Place hath a Latitude, *the other none; Suppoſe* Surrat *and* Naſſau Iſle. *What is their* Meridionel Difference *of* Latitude?

From 1300 } *Merid. parts* } *Surrat* 21° 10′ N.
Subt. 0000 } in *Latitude.* } *Naſſau* Iſle 00, 00

Rem. 1300 = *Merid. Diff.* of *Lat.* required.

By *Logarithm. Tangents.*

RULE.

The Difference between the *Tangents*, (or *Co-tangents*) of $\frac{1}{2}$ *Co-latitude*, and the Tangent of 45°, divided by 1263, is equal to the *Meridional Difference* of *Latitude* in Minutes.

EXAMPLE.

Lat. } *Surrat*	21° 10′, $\frac{1}{2}$	Co-lat. 34° 25′	9,835780
} *Naſſau* Iſle	00, 00	—— T, 45 00	10,000000
		Diff. =	164220

1263) 164220. (1300 = *Merid. Diff.* of *Lat.*
379...
3...

EXAM-

EXAMPLE III.

In Latitudes of different kind, (one North, the other South;) Suppose, St. Christopher *and Cape* Negro; *what is their* Merid. Diff. *of* Latitude?

To	1067	*Merid. parts,*	St. *Christopher* 17° 30′ N.	
Add	973	in Latitude	Cape *Negro.* 16 00 S.	
Sum = 2040 = *Merid. Diff.* of *Lat.* required.				

By *Logarithm. Tangents.*

RULE.

The Sum of the Differences between the *Tangent* of 45° and the *Tangents* (or *Co-tangents*) of ½ Co-Latitude divided by 1263, is equal to the *Merid. Difference* of *Latitudes.*

EXAMPLE.

Lat.	St. *Christopher* 17° 30′	½ *Co-Lat.*	36° 15′	10,137760	
	Cape *Negro* 16 00		37 00	10,122886	
					257646

1263) 257646. (2039 &c. = *Merid. Diff.* of *Lat.* reqd.

50··

1257·

1203

&c.

The

The *Meridional Difference of Latitude* may be alſo found by *Gunter's Scale*,

Thus;

The Extent of the Compaſſes from one *Latitude* to another, on the *Meridian-Line*; will give *Merid. diff. of Lat.* in *deg.* and *min.* on the *Equinoctial Line*, or *Line of Equal Parts*.

That Multiplied by 60, adding the odd Minutes (if there be any) gives the *Merid. diff. of Lat.* in *Miles*.

PROBLEM II.

Given the Longitude of two Places; Required their Difference of Longitude.

RULE.

In Longitudes of { the ſame / contrary } name, their { Diff. / Sum } is the *Difference of Longitude* required.

NOTE.

If that Sum exceed 180 *deg.* its Complement to 360 *deg.* is the *Difference of Longitude*.

EXAMPLE I.

Required the *Difference of Longitude* between *Barbadoes* and *Madera*.

From	the *Longitude* of	*Barbadoes* ——	53°, 40′ W.
Subt.		*Madera.* ——	11, 19 W.
Rem. = *Difference of Longitude* required.			42, 30

EXAMPLE II.

Required the *Difference* of *Longitude* between St. *Chriſtopher*, and Cape *Negro*.

To Add	the *Longitude* of	St. *Chriſtopher*	55° 15′ W
		Cape *Negro*	18, 45 E.
Sum, = *Differ.* of *Longitude* required			74, 00

EXAMPLE III.

Required, the *Difference* of *Longitude* between Cape *Horn* and *Bantam*.

To Add	the *Longitude* of	*Bantam*	115° 45′ E.
		C. *Horn*	74, 00 W.
Sum, =			189, 45

Then, from	360° 00′
Subtract	189, 45
Remainder	170, 15 = *Difference* of *Longitude*.

PROBLEM III.

Given, *The Longitude of one Place, and the Difference of Longitude between that and another*; Required, *the Longitude of that laſt Place.*

RULE.

Caſe 1. If the given *Longitudes* and *Difference* of *Longitude*, be of the ſame kind, their *Sum* is the *Longitude* required, of the ſame Name with the firſt Place.

NOTE.

NOTE.

That if the *Sum* be more than 180 *deg.* its Complement to 360 *deg.* is the *Longitude* required, of contrary Name with that of the firſt Place.

CASE II.

But if the given *Longitudes* and *Difference* of *Longitude* be of different Kind, their Difference is the Longitude required, of the ſame Name with the greateſt.

EXAMPLE I.

Suppoſe from the Longitude of 7° 36′ W. a Ship Sails Weſterly, till the Difference of Longitude be 32° 24′; I demand the Longitude ſhe is in?

By CASE I.

To the Departed	Longitude	7° 36′	Weſt.
Add Difference		32, 24	
Sum is the Preſent		40, 00	Weſt.

EXAMPLE II.

If from the Longitude of 140° 00′ VV. a Ship Sails VVeſterly till the Difference of Longitude be 56° 20′; what Longitude is ſhe in?

By CASE I.

To the Departed } Longitude { 140° 00′ West.
Add Difference } { 56, 20

Sum is ——————— 196, 20

From 360° 00′
Subtr. 196, 20

Rem. = 264, 40 = Present Longitude, East.

EXAMPLE III.

Suppose from the Longitude of 40° 00′ *VV. a Ship Sails Easterly, till the Difference of Longitude be* 32° 24′; *I demand the present Longitude?*

By CASE II.

From Departed } Longitude { 40° 00′
Subt. Difference } { 32, 24

Rem. = Present } { 7, 36 West.

NOTE,

That the *Latitudes* and *Longitudes* of most of the Places mentioned in this Book, were taken from the New and Correct Chart, lately Published by that Excellent Mathematician Captain *Edmund Halley*; who by His Majesty's especial Command, made a Voyage into the Western and Southern Ocean, to observe the *Magnetick Variation*, &c.

CHAP. IX.

Mercator's Sailing.

As Plain Sailing ſhews the various motion of a Ship on a Plain, where the Meridians are all made Parallel one to another, the Parallels at Right-angles to the Meridians, and the Degrees of each Parallel equal to thoſe of the Equinoctial; (In which, tho' according to this way of Working, each Parallel is falſly ſuppoſed equal to the Equinoctial, and the Terraqueous Globe as falſly to be Plain and Flat; Yet if a Ship Sail under or near the Meridian, or near the Equator, a ſhort Voyage, or a long one cut into many ſhort ones, may be tollerably well perform'd by it:)

So Mercator's, *or rather* Wright's *Sailing, ſhews in any aſſign'd Courſe, the Ship's Motion on an imaginary Plain, where the Parallels of Latitude are ſtrait Lines, and the Meridians alſo Parallel to one another; by a Method which is certain and demonſtrable, both in* Longitude, Latitude *and* Diſtance; *and is the only* True way of Sailing, *that is practicable; for that by the* Ark of a great Circle *is, I fear, not ſo.*

'Tis well known, that in the Terreſtial-Globe, all the Meridians meet at the Poles, and therefore the Parallels to the Equator do continually decreaſe as they grow nearer the Pole, in ſuch Proportion *As the Semi-diameter of ſuch Parallel* (i. e. *the Co-ſine of the Latitude*) *is to the Radius of the Equator*; whence 'tis evident that *a Degree of Longitude in ſuch Parallels, is leſs than a Degree of Longitude in the Equator, (or a Degree of Latitude in the Meridian.)*

But

But in the *Plain Chart*, the Meridians (*q P*, *q P*) are repreſented by Parallel ſtrait Lines (*qp*, *qp*) and

each Parallel to the Equator (*l a*) repreſented (as λ *a*) as equal to the Equator; and a Degree of Longitude therein as large, as in the Equator; *So that each Degree of Longitude in ſuch Parallels, is increaſed beyond its due Proportion, by as much as the Equator or its Radius, is greater than ſuch Parallel or its Radius.*

Thus, if two Ships under the Equinoctial be 10 Degrees or 200 Leagues aſunder, and ſince all South or North Courſes that a Ship can Sail upon, are Meridians, and conſequently will interſect one another in the Poles, 'tis certain, that in the Latitude of 60 Degrees, they'll be but 100 Leagues Diſtant (for Similar Arches are to each other as their reſpective Radius's) Wherefore, at the Pole they muſt neceſſarily meet; tho' on the *Plain Chart* they are ſuppoſed to be as far Diſtant even there as at firſt, becauſe the Meridians are made Parallel one to another.

Now

Now as a means in ſome meaſure to Correct ſo groſs an Errour, Mr. *Wright* lets the Meridians remain Parallel, and makes his Chart by this Proportion: *As the Radius of the Parallel (or Co-ſine of Latitude) is to the Radius of the Equator; So is a Degree of the Equator, to a Degree of Latitude, ſo protracted, as to be repreſented in the Chart at ſuch Diſtance from the Equator*: That is, always: in ſuch Proportion, *as is that of the Secant of the Latitude to the Radius.*

For, *Co-ſine*: *Rad.* :: *Rad.*: *Secant.*

That is, NQ (=LA): LQ :: ÆQ: TQ.

Wherefore the Parts of the Meridian at every Point of Latitude, muſt increaſe as the Secants of thoſe Latitudes: That is, the Points of Latitude at each Parallel muſt be protracted in like Proportion with thoſe of Longitude.

Hence 'tis, that *the Diſtance and Poſition of any Parallel (repreſenting the Latitude in the Chart) from the Equator, ſhall be to a Similar Arch of the Equator, (equal to the given Latitude) as the aggregate of all the Secants in the Arch, to ſo many times the Radius.* As the Learned Dr. *Wallis* hath Demonſtrated in *Philoſ. Tranſ.* N. 176. And

And the Ingenious Captain *Halley* in *Philoſ. Tranſ.* N. 219. has alſo proved, That the *Sum of the Secants*, or *Meridian Line* on the Chart, is Proportional to the *Scale of Logarithmick Tangents*; but the *Meridian Line* is a Table of the *Difference of Longitude*, to each minute of Latitude, on the Rhumb making an Angle of 45 *deg.* with the Meridian; wherefore, the *Scale of Logarithmick Tangents*, is a Table of the *Difference of Longitude* to the ſeveral Latitudes upon ſome determinate Rhumb; Hence it follows, that, *As the Tangent of that Rhumb, is to the Tangent of any other Rhumb; ſo is the Difference of the Logarithms of any two Tangents, to the Difference of Longitude on the propoſed Rhumb, intercepted between the two Latitudes, whoſe half Complements the Logarithmick Tangents did repreſent.*

PROBLEM. I.

Given, *Latitude and Longitude of two Places*;
Reqd. *Their Courſe, Diſtance and Departure?*

EXAMPLE.

From the Lyzard *to* Antego, *the Courſe, Diſtance and Departure is required?*

Preparation.

From	50°,10′	} Lat.	{ *Lyz.*	} M. P.	{ 3490	} Long.	{ 00°,00′
Subtr.	17,25	{	{ *Ant.*	{	{ 1061	{	{ 54,15 W.
Rem.	32,45	*Mer. Diff. Lat.* = 2429					54, 15
	60						60

1965 *m.* = *Diff. Lat.* *Diff. Longt.* = 3355 *m.*

EXPLA-

EXPLANATION.

In $\triangle abc$ { given { ba (Merid. Diff. Lat.) = 2429 ; bc (Diff. Longit.) = 3255 ; reqd. { $\angle c$ = Course, $\angle b$ = Compl. Course.

In $\triangle cde$ { given { cd (Proper Diff. Lat.) = 1965 ; reqd. { ce (Distance of Places) ; de (Departure from the Meridian) ; $\angle c$ = Course, $\angle d$ = Compl. Course.

In the Triangle abc, Course required?

PROPORTION.

Mer. diff. Lat. : Radius :: Diff. Long. : T, Course

2429 *min.* : T, 45 *deg.* :: 3255 *min.* : T, 53°, 16′

OPERATION.

To Ar. co. Log. *Mer. Diff. Lat.* 2429		6,61457
Add. —— Log. *Diff. Long.* 3255		3,51255
Sum, = Tangent of the *Course*	53°, 16′	10,12712

By Gunter's *Scale.*

The Extent from *Mer. Diff. Lat.* 2429 } on the Line
To the —— *Diff. Long.* 3255 } of Numbers.
Will Reach from T, *Radius* 45°,00 } on the Line of
To the —— T, *Course* 53, 16 } Tangents.

In △ *cde, distance* what?

PROPORTION.

c s, Course : Radius : : Diff. Lat. : Distance.
S, 36°, 44′ : S, 90°, 00′ : : 1965 *m.* : 3285 *m.*

OPERATION.

To Ar. co, c s, *Course*, S, 36°, 44′	——	0,22323
Add the Log. *Diff. Lat.* 1965	——	3,29336
Sum, = Log. *Distance* 3285	——	3,51659

By Gunter's *Scale.*

The Extent from S, *Compl. Course*, 36°, 44′ } on the Line
To the —— —— *Radius*, 90, 00′ } of Sines.
Reaches from *Diff. Lat.* —— 1965 } on the Line
To the —— —— *Distance* 3285 } of Numbers.

Distance

Distance what?

PROPORTION.

by Probl. 3. Plain Sailing.

Radius: Diff. Lat. :: T, Course: Departure.

T, 45° : 1965 *m.* :: T, 53° 15′ : 2633 *m.*

PROBLEM II.

Given, *Latitudes and Course*;
Reqd. *Distance, Diff. of Longitude, and Departure?*

EXAMPLE.

Sailing from the Lyzard, *Latitude* 50° 10′ *N. Course being (variation and Leeward-way, &c. allow'd for) S. Westerly* 53° 16′, *or S. W.* ¾ *W. near, and finding by observation the Ship to be in Latitude* 17° 25′ *N.; what is the* Distance run, Departure, and Difference of Longitude?

Preparation.

From 50° 10′	N. *Latit.*	*Lyzard*	*Merid.*	3490
Subtr. 17, 25		observ'd	*parts*	1061
Rem. 32, 45 = 1965 = *diff. Lat.*		*Mer. diff. Lat.*		= 2429
Distance by Probl.	1st.			3285
Departure by Probl.	1d.	*Plain Sailing*		2633

Difference of Latitude what?

PROPORTION.

Radius: Merid. Diff. Lat. :: T, Course: Diff. Long.

T, 45° 00′ : 2429 *m.* :: T, 53° 16′ : 3255 *m.*

OPERATION.

To Log. *Mer. Diff. Lat.* 2429 ——— 3,38542
Add the T, *Course* 53,16 ——— 10,12712

Sum, = Log. *Diff. Long.* 3255 ——— 3,517254

By Gunter's Scale.

The Extent from T, *Radius* 45° 00′ } one the Line of
To the T, *Course* 53, 16 } Tangents.
Reaches from *Merid. Diff. Lat.* 2429 } on the Line of
To the *Diff. Long.* ——— 3255 } Numbers.

PROBLEM. III.

Given, *Latitudes and Distances*;
Reqd. *Course, Departure, and Difference of Longitude?*

EXAMPLE.

Sailing North East-ward from Antego 2285 *Miles, and by observation finding my Latitude to be* 50° 10′ *North*; *what's the* Course, Departure, and Difference of Longitude?

Preparation.

From 50° 10′ N. } Lat. { observed } *Mer. pts.* { 3490
Subtr. 17, 25 N. } { *Antego* } { 1061

Rem. 32, 45 = 1965 = *Diff. Lat.* | *Mer. Diff. Lat.* = 2429

Course what?

PROPORTION.

Distance : Diff. Lat. :: Radius : S, Course.
3285 : 1965 :: S, 90° 00′ : S, 36° 44′

OPE-

OPERATION.

To Ar. co. Log. *Dist.* 3285 ——— 6,41348
Add Log. *Diff. Lat.* 1965 ——— 3,29886

Sum, = S, *Course* 36° 44′ ——— 9,77677

By Gunter's *Scale.*

The Extent from *Dist.* ——— 3285 } on the Line of
To the *Diff. Latitude* ——— 1965 } Numbers.
Reaches from S. Rad. ——— 90° 00′ } on the Line of
To S, Comp. *Course* ——— 36, 44 } Sines.

Then by Probl. { 1st. *Departure* = 2633
{ 2d. *Diff. Long.* = 3265

PROBLEM IV.

Given, *Latitude and Departure*;
Reqd. *Course, Distance, and Difference Longitude?*

EXAMPLE.

A Ship from Latitude 50° 10′ *N. and Longitude* 00° 00′, *runs South Westerly till her Departure be* 2633, *and the observed Latitude* 17° 25′ *N*; *what's the* Course, Distance, and Difference of Latitude?

Course what?

PROPORTION.

Diff. Lat. : Depart. :: Radius : T, Course.
1965 : 2633 :: T, 45° 00′ : T, 53° 16′

OPE-

OPERATION.

To Ar. co. Log. *Diff. Lat.*	1965	——	6,70664
Add the Log. *Departure.*	2633	——	3,42048
Sum, = T, *Course*	53° 16′	——	10.12712

By Gunter's *Scale.*

The Extent from *Diff. Lat.* —— 1965 } on the Line of
To the *Departure.* —— 2633 } Numbers.
Reaches from T, *Radius* —— 45° 00′ } on the Line of
To the T, of the *Course* —— 53, 16 } Tangents.

Then by Probl. { 1ſt. *Diſtance* = 3285 } *min.*
{ 2d. *Diff. Long.* = 3255 }

PROBLEM V.

Given, *One Latitude, Courſe, and Diſtance;*
Reqd. *Difference of Latitude, and Diff. of Longitude?*

EXAMPLE.

A Ship from 50° 10′ *N. Lat. and* 00° 00′ *Long. runs S.* 53° 16′ *W.* 3285 *Miles; what is the* Difference of Latitude, and Difference of Longitude?

Difference of Latitude what?

Radius : S, Courſe :: Diſt. : Diff. Lat.
S, 90° 00′ : S, 36° 44′ :: 3285 *m.* : 1965 *m.*

OPE-

OPERATION.

To the S, of the *Course* 53° 16′ —— 9,77676
Add the Log. *Distance* 3285 —— 3,51659

Sum, = Log. *Diff. Lat.* 1965 —— 3,29335

By Gunter's Scale.

The Extent from S, *Rad.* —— 90° 00′ } on the Line of
To the S, Comp. *Course* — 36, 44 } Sines.
Reaches from the *Distance* —— 3285 } on the Line of
To the *Diff. Lat.* —— —— 1965 } Numbers.

1965 (= 32° 45′ = *Diff. Lat.* in *deg.* and *min.*

EXAMPLE.

From Latitude 50° 10′ *N. Sailing S.* 53° 16′ *Westerly, till I am in Longitude* 54° 15′ *W.; what is my* Distance, Departure, and Difference of Latitude?

From 00° 00′ = *Departed* ——— } Longitude.
Subtr. 54, 15 = *Present* ——— }
Rem. = 54, 15 = 3255 = *Difference.*

Meridional Difference of Latitude what?

PROPORTION.

Radius : ct, Course : : Diff. Long. : Mer. Diff. Lat.
T, 45° 00′ : T, 36° 44′ : : 3255 *m.* : 2429 *m.*

OPERATION.

To the ct. *Course* ——— 53° 16 ——— 9,87290
Add Log. *Diff. Long.* ——— 3255 *m.* ——— 3,51255

Sum, — Rad. = Log. = *Mer. Diff. Lat.* 2429*m.* 3,38545

By Gunter's Scale.

The Extent from T, *Rad.* ——— 45° 00′ } on the Line of
To T, *Compl. Course* ——— 36, 44 } Tangents.
Reaches from *Diff. Long.* ——— 3255 } on the Line of
To *Merid. Diff. Lat.* ——— 2429 } Numbers.

From 3490 } *Mer.* { *pts. in Departed* } *Lat.* { 50. 10′
Subtr. 2429 } { *Difference* } { 17, 25
Rem. = 1061 } { *pts. in Present* }

Then by Probl. 2. Plain Sailing { *Distance* = 3285
{ *Departure* = 2633

CHAP.

CHAP. X.

Some Problems of Sailing, under a Parallel of Latitude.

PROBLEM I.

GIven, *Difference of Longitude, and Distance of two Places in the same Latitude;*
Required, *The Latitude?*

EXAMPLE.

Two Ships in the Equator 400 Miles from one another, one Sails North, the other South alike Distances, till they are 150 Miles asunder; what Latitude *are they in?*

PROPORTION.

Diff. Long. : Radius :: Distance : cs, Lat.
400 : S, 90° :: 150 : S, 22° 01′

OPERATION.

To Ar. co. Log. *Diff. Long.*	400	——	7,39794
Add the Log. *Distance.*	150	——	2,17600
Sum, = cs, *Latitude*	67° 59′	——	9,57394

By Gunter's *Scale.*

The Extent from *Diff. Long.* 400 } on the Line of
To the *Distance* —— 150 } Numbers.
Reaches from S, Rad. —— 90° 00′ } on the Line of
To S, Comp. *Latit.* —— 22, 01 } Sines.

PROBLEM II.

Given, *Difference of Longitude, between two Places in the same Latitude.*

Reqd. *Their Distance?*

EXAMPLE.

The Distance between Martineco *and Cape* Virde *is required?*

Preparation.

From 54° 50′ } Long. { *Martineco* } Lat. = 14° 50′ N.
Subtr. 11, 30 } { C. *Virde* }

Rem. 43, 20 = 2600 *m.* = *Difference of Longitude.*

PROPORTION.

Radius : Diff. Long. :: cs, Lat. : Distance.

S, 90° 00′ : 2600 *m.* :: cs, 14° 50′ : 2513 *m.*

OPERATION.

To Log. *Diff. Long.*	2600	——	3,41497
Add the cs, *Latitude*	14° 50′	——	9,98528
Sum, 2 Rad. = Log. *Dist.*	2513	——	3,40025

By Gunter's *Scale.*

The Extent from S, *Rad.* —— 90° 00′ } on the Line of
To the S, Comp. *Lat.* —— 75, 10 } Sines.
Reaches from *Diff. Long.* —— 2600 } on the Line of
To the *Distance* —— 2513 } Numbers.

COROLL.

COROLL.

Hence is found how many Minutes or Miles make a Degree of Longitude in any Latitude or Parallel.

EXAMPLE.

Suppose in the Latitude of 40° it was required how many Minutes of Eafting or Weſting of that Parallel make a Degree of Longitude?

PROPORTION.

Radius : cs, Latitude : : Equinoctial deg. : Parallel deg.
S, 90° : cs, 40° : : 60 *min.* : 45,96 *m.*

OPERATION.

To the cs, *Lat.* 40° 00′ ———	9,88425
Add the Log. *Equinoct. deg.* 60 *m.* ———	1,77815
Sum,— *Rad.* = *Parallel deg.* 45,96 *m.* ———	1,66240

By the Plain-Scale.

The given *Latitude* from the *Line of Chords*,
Laid on the *Line M. L. (Miles of Longitude,)*
Gives the Minutes of a *Degree* of *Longitude* in that *Latitude*.

PROBLEM. III.

Given, *The Diſtances between two Places in the ſame Parallel*;
Reqd. *The Difference of Longitude?*

EXAMPLE.

Sailing from Cape Virde *in Latitude* 14° 50′ *N. to an Iſland* 2513 *min. Weſt. I demand the* Longitude *of the Iſland?*

PRO-

PROPORTION.

cs, Latit. : Distance :: Radius : Diff. Long.
S, 75° 10′ : 2513 *m.* :: S, 90° 00′ : 2600 *m.*

OPERATION.

To Ar. co. cs, *Latitude*	14° 50′	——	0,01472
Add the Log. *Distance*	2513	——	3,40025
Sum, = Log. *Diff. Long.*	2600	——	3,41497

By Gunter's *Scale.*

The Extent from S, *Comp. Lat.*	75° 10′	} on the Line of
To the Sine of the *Radius*	90, 00	} Sines.
Reaches from the *Distance*	2513	} on the Line of
To the *Diff. Long.* ——	2600	} Numbers.

To $\frac{2600}{60}$ (= 43° 20′ = *Diff. Long.* in *Deg.* and *Min.*
Add —— 11, 30 = *Longitude* of Cape *Virde*

Sum, = 54, 50 = *Long.* of the Place the Ship is in.

CHAP.

CHAP. XI.

Problems of Sailing by middle Latitude, a Method nearly agreeing with Mercator's, *and perform'd by the Logarithms, or* Gunter's *Scale, without the help of the Meridional Parts.*

PROBLEM I.

Given, *Latitudes, and Longitudes;*
Reqd. *The Course and Distance?*

EXAMPLE.

Between Island Flores *and* Barbadoes; *I demand the* Course *and* Distance?

39° 10′ N. } Lat. { I. *Flores* } Long. = { 26° 30′ } W
13, 10 N. } { *Barbadoes* } { 53, 45 }

52, 20 = Sum, —— *Diff. Long.* = 27, 15 = 1635
26, 10 = = ½ Sum = *Middle Latitude*

26, 00 = 1560 = *Difference* of *Latitude.*

To find the Course?

PROPORTION.

Diff. Lat. : cs, Mid. Lat. : : Diff. Long. : T, Course.
1560 : cs, 26° 10′ : : 1635 : T, 42° 31′

OPE-

OPERATION.

To Ar. co. Log. *Diff. Lat.* 1560 —— 6,79588
Add the { Log. *Diff. Long.* 1635 —— 3,21351
{ cs, *Mid. Lat.* 26° 10′ —— 9,95304
Sum, = T, *Course* —— 42, 31 —— 9,96243

By Gunter's *Scale.*

The Extent from S, *Radius* 90° 00′ } on the Line of
To the Compl. *Mid. Lat.* 63, 50 } Sines.
Reaches from T, *Radius* 145, 00 } on the Line of
To the T, *Course* —— 42, 31 } Tangents.

Distance what?

by Probl. 2. Plain Sailing.

PROPORTION.

cs, Course : Radius : : Diff. Lat. : Distance.
S, 47° 29′ : S, 90° 00′ : : 1560 *m.* : 2368 *m.*

OPERATION.

To Ar. co, cs, *Course*, 42° 31′ —— 0,17032
Add the Log. *Diff. Lat.* 1560 —— 3,20412
Sum, = Log. *Distance* 2368 —— 3,37444

By Gunter's *Scale.*

The Extent from S, *Compl. Course*, 47° 29′ } on the Line
To the —— *Radius*, 90, 00 } of Sines.
Reaches from *Diff. Lat.* —— 1560 } on the Line
To the —— *Distance* 2368 } of Numb.

PRO-

PROBLEM II.

Given, *Latitudes and Course*;
Reqd. *Distance and Difference of Longitude?*

EXAMPLE.

Sailing from Island Flores, *making our Course South* 42° 31′ *Westerly, and finding our Latitude by Observation to be* 13° 10′ *North*; *The* Distance *run, and* Difference *of* Longitude *is required?*

Preparation.

39° 10′ = ——— Island *Flores's*
13, 10 = ——— *Observed* } *Latitude.*
26, 00 = 1560 = *Diff. of*
26, 10 = ½ Sum, = *Middle*

Distance = 2368. by Prob. 2. Plain Sailing.

To find the *Difference* of *Longitude.*

PROPORTION.

cs, Mid. Lat. : Diff. Lat. :: T, Course : Diff. Long.
cs, 26° 10′ : 1560 *m.* :: T, 42° 31′ : 1635 *min.*

OPERATION.

To Ar. co. cs, *Mid. Lat.*	26° 10′	———	0,04696
Add the Log. *Diff. Long.*	1560	———	3,20412
Add the T, *Course*	42° 31′	———	9,96243
Sum, = Log. *Diff. Long.*	1635	———	3,21351

In working this, or the like Proportion *upon the Scale, observe this*

RULE.

The Extent from the T, *of the Radius*, ——— 45° 00′
To the ——— T, *of the third Term*;
Reaches (if 3*d Term* { greater / lesser } 45° 00′) from { 1*st Term* / S, 90° 00′
To the ——— *Third Term* Reduced.

As ſuppoſe the laſt Proportion,

The Extent from ——— T, 45° 00′ } on the Line of
To the ——— T, 42, 31 } Tangents,
Reaches from ——— S, 90, 00 } on the Line of
To the ——— S, 66, 00 } Sines.

Then,

The Extent from ——— S, 63° 50′ } on the Line of
To the ——— S, 66, 00 } Sines,
Reaches from *Diff. Lat.* ——— 1560 } on the Line of
To the *Diff. Long.* ——— 1635 } Numbers.

To (1635 =) 27° 15′ = *Difference*
Add ——— 26, 30 = I. *Flores's* } *Longitude.*
Sum, = ——— 53, 45 = *Preſent*

PROBLEM III.

Given, *Latitudes and departure*;
Reqd. *Courſe, Diſtance, and Difference of Longitude?*

EXAM-

EXAMPLE.

From Latitude 13° 10′ *North, and Longitude* 53° 45′ *Weſt, a Ship runs North Eaſterly till her Departure be* 1600 *Miles, and obſerved Latitude* 39° 10′ *North; I demand the* Courſe, Diſtance *and* Difference of Longitude?

Preparation.

39° 10′ = ——— *Obſerved*
13, 10 = ——— *Departed* } *Latitude.*

26, 00 = 1560 = *Diff. of*

26, 10 = ½ Sum, = *Middle Latitude.*

Courſe } by Probl. 6 Plain Sailing = { N. 42° 43′ E.
Diſtance } { 2368 *min.*
Diff. Longitude (by Probl. 2.) = 1635 = 27° 15′
And Conſequently the Preſent *Long.* = 26, 30 W.

PROBLEM IV.

Given, *Latitudes and Diſtances;*
Reqd. *Courſe, and Difference of Longitude?*

EXAMPLE.

Sailing from the Iſland Flores 1600 *Miles Weſterly, till the obſerved Latitude be* 13° 10′ *North;* the Courſe *and* Longitude *required?*

Preparation.

39° 10′ N. = Iſland *Flores's*
13, 10 N. = *Obſerved* } *Latitude.*

26, 00 = 1560 = *Diff. of*

26, 10 = ½ Sum, = *Middle Latitude.*

Course (by Probl. 4 Plain Sailing) = S. 42° 31′ W.erly.
Diff. of *Longitude* (by Prob. 2) = 1635 = 27° 15′
Therefore, Present *Longitude* ——— = 53, 45 W.

All the Problems in *Mercator's Sailing* may be wrought in like manner, both by *Logarithms* and *Scale*; but for Brevity sake we'll omit them, presuming this sufficient for a Learner's Instruction, leaving the rest for his Exercise.

ASTRO-

ASTRONOMICAL

Definitions and *Problems*

Useful in

NAVIGATION.

DEFINITIONS.

1. *DECLINATION* of any *Point* in the Heavens, is an *Arch* of a great Circle intercepted between that *Point* and the *Equinoctial.*

2. *Right Ascension* of any *Point*, is an *Arch* of the *Equinoctial*, intercepted between the beginning of *Aries* and the *Meridian* of that *Point.*

3. *Oblique* { *Ascension* / *Descension* } of any *Point* is an *Arch* of the *Equinoctial* contain'd between the beginning of *Aries* and that Part of the *Equinoctial* which { Riseth / Setteth } with that *Point.*

4. *Ascen-*

4. *Aſcenſional Difference*, is the Difference between the *Right Aſcenſion*, and the *Oblique Aſcenſion* or *Deſcenſion*.

5. *Amplitude* of any *Point*, is an *Arch* of the *Horizon* intercepted between the *Prime-vertical* and that *Point* in its Riſing or Setting.

6. *Altitude* of any *Point* above the *Horizon*, is an *Arch* of a *vertical Circle* intercepted between that *Point* and the *Horizon*.

7. *Azimuth* of any Point is an *Arch* of the *Horizon*, intercepted between the *Meridian*, and the *vertical Circle* which paſſeth through that *Point*.

8. *Latitude* of any *Point* on the *Surface of the Earth*, is an *Arch* of the *Meridian* intercepted between the *Zenith* of that *Point* and the *Equinoctial*; and is always equal to the *Height of the Pole*, above the *Horizon*.

PROBLEM I.

Given, *The Sun's Place, and greateſt Declination*;
Reqd. *The preſent Declination?*

PROPORTION.

Radius: S, greateſt Decl. :: S, Equinoct. Diſt.: S, Decl.

EXAMPLE.

Given, *Sun's* { *greateſt Decl.* 23° 30′ } Reqd. *preſent Decl.?*
{ *Place* —— 30, 00 ♈ }

OPE-

OPERATION.

To the S, *Equinoctial Dist.* 30° 00′ —— 9,69897
Add the S, *greateſt Decl.* 23, 30 —— 9,60069

Sum, = S, *preſent Decl.* 11, 30 —— 9,29966

By Gunter's *Scale.*

The Extent from S, *Radius* 90° 00′
To the S, *greateſt Decl.* 23, 30
Reaches from S, *Equino. Dist.* 30, 00
To the S, *preſent Decl.* 11, 30
} on the Line of Sines.

PROBLEM II.

Given, *The Sun's Place and greateſt Declination*;
Reqd. *His Right Aſcenſion?*

PROPORTION.

Rad. : c s, greateſt Decl. : : T, Equin. Dist. : T, Right Aſc.

EXAMPLE.

Given, *Sun's* { *Place* —— ♉ 19° 58′ } Reqd. *Right*
{ *greateſt Decl.* 23, 30 } *Aſcen.*

OPERATION.

To the cs, *greateſt Decl.* 23° 30′ —— 9,96239
Aud the T, *Equinoct. Dist.* 49, 58 —— 10,07567

Sum, = T, *Right Aſcen.* 47, 31 —— 10,03806

By Gunter's *Scale.*

The Extent from S, *Radius* 90° 00′
To the cs, *greateſt Decl.* S, 66, 30
Reaches from T, *Equinoct. Dist.* 49, 58
To —— T, *Right Aſcen.* 47, 31
} on the Line of Sines,
} on the Line of Tangents.

PRO-

PROBLEM III.

Given, *The Sun's present and greatest Declination*;
Reqd. *His Right Aſcenſion?*

PROPORTION.

T, greateſt Decl. : T, preſent Decl. :: Rad. : S, Right Aſc.

EXAMPLE.

Given { *greateſt* / *preſent* } *Decl.* { 23° 30′ / 11, 30 } Reqd. *Right Aſcen.*

OPERATION.

To Ar. co.	T, *greateſt*	*Decl.*	23° 30′	0,36170
Add the	T, *preſent*	*Decl.*	11, 30	9,30846
Sum, = S, *Right Aſcen.*			27, 53	9,67016

By Gunter's *Scale.*

The Extent from	T, *greateſt*	*Decl.*	23° 30′	on Line
To the	T, *preſent*	*Decl.*	11, 30	of Tan.
Reaches from	S, *Radius*		90, 00	on Line
To the	S, *Right Aſcen.*		27, 53	of S,

NOTE,

If from a *Star's* / be Subtr. the *Sun's* } *Right Aſcenſion,*

The Remainder reduced into *Time*, by

allowing { 15 *d.* 00 *m.* / 01 00 / 00 15 } for { 1 *h.* 00 *m.* / 0 04 / 0 01 } of Time

ſhews when that *Star* comes to the *Meridian*; whence the *Hour of the Night* is eaſily known.

PRO-

PROBLEM IV.

Given, *Pole's Height, and Sun's Declination*;
Required, *the Aſcenſional Difference.*

PROPORTION.

ct, Lat. :: T, Decl. :: S, Rad. : S, Aſcen. Diff.

EXAMPLE.

Given { *Latitude* 51°, 30′ N. } Reqd. *Aſcen. Diff.*
{ *Declination* 9, 00 }

OPERATION.

To Ar. co. ct, *Latitude*	51°, 30′	——	0.09939
Add the T, *Declination*	9, 10	——	9.19971
Sum, = S, *Aſcen. Diff.*	11, 29	——	9.29910

By Gunter's *Scale.*

The Extent from T, co. *Lat.* 38°, 30′ } on the Line of
To the —— T, *Decl.* 9, 00 } Tangents.
Reaches from S, *Radius* 90, 00 } on the Line of
To the S, *Aſcen. Diff.* 11, 29 } Sines.

NOTE.

1. If *Latitude* and *Declination* are of { one / diff. } kind,
the Sun *riſes* { before / after } and *ſetts* { after / before } 6 a Clock.

Therefore,

2. *Asten. Diff.* reduced, and {Added to / Subtr. from} 6, in North *Decl.* gives the Sun's {*setting* / *rising*,} in South *Decl.* gives the Sun's {*rising* / *setting*.}

3. The Length of the {Day / Night} is double the Time of the Sun's {*setting* / *rising*.}

PROBLEM V.

Given, *The Latitude, and Sun's Declination*;
Required, *the Sun's Amplitude?*

PROPORTION.

cs, Latitude : Radius : : S, Decl. : S, Amplitude.

EXAMPLE.

Given {*Latitude* 51°, 30′ N. / *Declination* 11, 50} Reqd. *Amplitude*

OPERATION.

To Ar. co. cs, *Latitude*	51°,	30′	0.20585
Add the S, *Declination*	11,	50	9.31189
Sum, = S, *Amplitude*	15,	11	9,51764

By

By Gunter's *Scale.*

The Extent from S, *Comp. Lat.* 38°, 30′
To the S, *Radius* —— 90, 00
Reaches from S, *Decl.* —— 11, 50
To the S, *Amplit.* —— 19, 13
} on the Line of Sines.

PROBLEM VI.

Given, *Latitude, and Sun's Declination;*
Requir'd, *The Sun's Altitude at 6?*

PROPORTION.

Rad. : S, Decl. : : S, Lat. : S, Altitude at 6.

EXAMPLE.

Given { *Latitude* 51°, 30′ / *Declination* 20, 00 } Reqd. *Altitude at 6?*

OPERATION.

To the S, *Latitude*	51°,	30′ ——	9.53405
Add the S, *Declination*	20,	00 ——	9.89354
Sum, = S, *Altit. at* 6,	15,	31 ——	9.42759

By Gunter's *Scale.*

The Extent from S, *Radius* 90°, 00′
To the S, *Declination* 20, 00
Reaches from S, *Latitude* 51, 30
To the S, *Altitude at* 6 15, 31
} on the Line of Sines.

PROBLEM VII.

Given *Latitude, and the Sun's Declination*;
Required *the Sun's Azimuth at 6?*

PROPORTION.

cs, Latitude : Radius : : ct Decl. : T, Azimuth at 6.

EXAMPLE.

Given { *Latitude* 51°, 30′ } Reqd. *Azim. at* 6,
{ *Declination* 11, 31 }

OPERATION.

To Ar. co. cs, *Lat.*	51°, 30′	——	0.20585
Add the ct, *Decl.*	11, 31	——	10.69089
Sum, = T, *Azim. at* 6	83, 50	——	10.89674

By Gunter's *Scale.*

The Extent from S, *Lat.* 51°, 30′ } on the Line of
To the S, *Radius* —— 90, 00 } Sines.
Reaches from T, *Co-Decl.* 78, 29 } on the Line of
To the T, *Azim. at* 6. 83, 50 } Tangents.

PROBLEM VIII.

Given *the Latitude, Sun's Declination, and Hour*;
Required *the Sun's Altitude?*

PROPORTION.

R, : S, *Compl. Hour from Noon* : : ct, *Lat.* : T, 4*th Arch.*
And *Co-Decl.* — 4*th* = 5*th Arch.*

Then, cs, 4*th Arch* : cs, 5*th Arch* : : S. *Lat.* : S. *Altit.*

Whence

Whence this RULE;

To the ct, of the *Latitude*,
Add the cs, of the *Hour from Noon*;
Sum is the T, of a *4th Arch*.

And,

For Hours { between 6 and 6, / before or after 6, } the { Diff. / Sum } of the *4th Arch* and *Co-Declination* will be a *5th Arch*.

Then,

To Ar. co. of the cs, of the *4th Arch*,
Add the { cs, of the *5th Arch*, / S, of the *Pole's* } *Height*.
Summ is the Sine of the *Sun's*

EXAMPLE.

Given { *Co-Latitude* 38° 30′ / *Co-Declinat.* 70, 00 / *Hour from Noon* 60, 00 } Req. *Sun's Altit.?*

OPERATION.

To the T, *Co-Latitude*	38°	30′	9.90060
Add the cs, *Hour from Noon*	60,	00	9.69233
Sum, = T, *4th Arch.*	21,	23	9.59293
From *Co-Decl.*	70,	00.	
Subt. *4th Arch*	21,	23	
Rem, = *5th Arch*	48,	37	

Then,

Then,

To Ar. co. cs, 4th *Arch*	21°	23	——	0.03097
Add the cs, 5th *Arch*	48,	37	——	9.82026
Add the S, *Latitude:*	51,	30	——	9.89354
Sum, = S, *Altitude.*	33,	45	——	9.74477

PROBLEM IX.

Given, *the Latitude, Sun's Declination and Altitude*; Required, *the Sun's Azimuth?*

RULE.

Add the Complements of your *Data* together, and find the *difference* between their *half Sum* and the *Co-Declination.*

Then,

To the Ar. co. of the Sine of the *Co-* { *Latitude* / *Altitude* }

Add to the Sine of { *half Sum* / *Difference* } (afore found,) and twice the Complement of the Arch, answering to ½ the Sum of the 4 *Logarithms*, is the *Azimuth* required.

EXAMPLE.

Given	*Latitude*	65°	40′	Required *Azimuth?*
	Declination	17,	00	
	Altitude.	37,	26	

OPE-

OPERATION.

To Ar. co. S, { Co-Lat. 24° 20′ —— 0.38505
Co-Alt. 52, 34 —— 0.10014
Co-Decl. 73, 00

Sum, = 149, 54

Add { S, — ½ Sum, = 74, 57 —— 9,98484
S, ½ Sum, — Co-Dec. 1, 57 —— 8,53182

Sum, = —— 19.00175
Its half = cs, 71° 32′ —— 9.50087
And 71° 32′ + 71° 32′ = 143° 04′ = *Azimuth* reqd.

PROBLEM X.

Given, *the Latitude, Sun's Declination, and Altitude*; Required *the Hour of the Day.*

RULE.

Add the Complement of your *Data* together, and find the *Difference* between their ½ Sum and the *Co-Altitude.*

Then,

To the Ar. co. of the Sine of the *Co-* { *Latitude* / *Declination.*

Add the Sine of the { *half Sum* / *Difference* } (afore found), And the double Complement of the *Arch* answering to ½ the Sum of the 4 *Logarithms* is the *Hour from Noon.*

EXAMPLE.

Given { *Latitude* 65° 40′ / *Altitude* 37, 26 / *Declination* 17, 00 } Reqd. *Hour of the day.*

OPE-

OPERATION.

To Ar. co. S,	Co-Lat.	24°	20′		0.38505

OF

OF THE VARIATION OF THE COMPASS.

THE Deflection of the *Magnetical Needle* from the *true Meridian*, or that Arch of the *Horizon*, (either *Eaſtward* or *VVeſtward*) intercepted between the *true*, and the *Magnetical Meridian*, is called the *Variation of the Compaſs*.

This *Variation* may be found either by the *Amplitude* or *Azimuth*.

If by the *Amplitude*; then the *Latitude*, *Sun's Declination*, and *Magnetical Amplitude* muſt be known.

Magnetical Amplitude is the diſtance (found by an *Amplitude Compaſs*) between the Place of the Sun's *Riſing* or *Setting*, and the *Eaſt* or *VVeſt* Points of the *Compaſs*.

When *Amplitudes* are { the / not the } { same } { there's no / diff. is the } *vari.*

In counting both *Amplitudes* from the *North*, observe this.

RULE.

If { *true* / *mag.* } *Ampl. greateſt* { *riſing*, *variat.* } at Sun { *Eaſt* / *VVeſt.* } at Sun { *ſetting* } { *VVeſt* / *Eaſt.* }

Or,

Amplitudes of { one } { kind, } their { diff. / Sum } is the *variat.*

Or,

If *Magnet. Ampl.* be to the { Right / Left } of the *true Ampl.* { the *variation* } is { *VVeſt* / *Eaſt.* }

EXAMPLE.

Given { Sun's	*Latitude* —— ——	50°	10′	N.
	Declination	15,	20	
	Magnet. Ampl.	30,	16	A.M.

Required, *Variation of the Compaſs?*

OPERATION.

By the 5th Aſtronom. Probl.

To Ar. co. cs.	*Latitude*	50°	10′ ——	0.19344
Add S,	Sun's *Decl.*	15,	20 ——	9.42231
Sum, = S, Sun's *true Ampl.*		24,	21 ——	9.61575
From which Subt.	*Mag. Am.*	10,	16	
Rem. = *variation* =		14,	05 *Weſterly.*	

In

In finding the *Variation* by the *Azimuth*; the Sun's *Declination*, *Altitude*, *Magnetical Azimuth*, and the *Latitude of the Place*, muſt be known.

Magnetical Azimuth is the diſtance on the *Horizon*, (found by an *Azimuth Compaſs*) between the *Magnetical Meridian* and the Sun's *Azimuth Circle*.

NOTE,

When theſe *Azimuths* are { the / not the } { same } { there's no / diff. is the } *Variation*.

In counting the *Azimuths* from the North, obſerve this

RULE.

If { *true* / *mag.* } *Azimuth* greateſt, *variation* (in forenoon) is { *Eaſt* / *Weſt* } in afternoon { *Weſt* / *Eaſt*. }

Or,

Counting both *Azimuths* from { *North* / *South* } in { *North* / *South* } *Latitude*, and their *Difference* gives the *Variation*.

And,

If the *true Azimuth* be to the { *right* / *left* } of the *Magnetical Azimuth*, the *Variation* is { *Eaſt* / *Weſt*. }

EXAMPLE.

Given { Latitude ——— 50° 10' } N.
Sun's { Declination ——— 10, 40 } N.
Sun's { Magnet. Azimuth 124, 14 }
Sun's { Altitude. ——— 12, 16 Ar. M.

Reqd. the *Variation* of the *Compass*.

OPERATION.

By 9th Astronom. Probl.

Co- { Lat. = 39° 50'

× 2

Doubled = 92, 00
Subtr. from 180, 00

Rem. = 88, 00 = Sun's true Azimuth.

From *Mag.* Azimuth 124° 14'
Subtr. *true* 88, 00

Rem. = *variation* = 36, 14 *Westerly.*

Having

Having the *Variation* and *Course* steered upon; the *true Course* is found by this

RULE.

Course and *Variation* of the { same / diff. } kind; their { Sum / diff. } is the true Course.

CHAP. XII.

To work an Observation.

DEFINITION.

THE *Height* of the Sun or Star above the *Horizon* when they are upon the *Meridian* of the Place, is called the *Meridian Altitude*.

NOTE.

That the Complement of the *Meridian Altitude* is called the *Zenith Distance*.

PROBLEM.

Given, *the Sun or Star's Merid. Alt. and Declination*; Reqd. *the Latitude of the Place?*

CASE. I.

When the observed *Object* doth both *Rise* and *Set*, and consequently has but one *Meridian Altitude* in the space of 24 Hours.

RULE.

RULE.

The *Meridian Alt.* and *Declination.* of { the same / contrary } kind, the { Diff. / Sum } of the *Zenith Distance* and *Declination*, is the *Latitude* Required.

NOTE.

1. Where the *Merid. Alt.* and *Decl.* is of the same kind, If *Decl.* be { greater / lesser } then the *Zenith dist.* the *Lat.* is of { the same / contrary } Name to the *Declination.*

2. But where the *Merid. Alt.* and *Declination* is of different kind, the *Latitude* is of the same Name with the *Declination.*

EXAMPLE. I.

Given, *Sun's Merid. Alt.* by *Observ.* 10° 00′ South
and his *Declination* 15, 00 South
Reqd. *the Latitude of the Place?*

From the *Zenith Distance*	80°	00	S.
Subtract the *Declination*	15,	00	S.
Remainder is the *Latitude.*	65,	00	N.

EXAMPLE. II.

Given, *the Sun's Declination* 20° 16′ N.
and his *Zenith Distance* 12, 10 N.
Reqd. *the Latitude of the Place?*

From the Sun's *Declination*	20°	16	N.
Subtract his *Zenith Distance*	12,	10	N.
Remainder is the *Latitude* reqd.	08,	06	N.

PRO-

EXAMPLE III.

Given, *the Sun's Zenith Distance* —— 30° 00′ S.
and his *Declination* —— 22, 30 N.
Reqd. *the Latitude of the Place?*

To the *Zenith Distance* —— 30° 00′ S.
Add the *Declination* —— 22, 30 N.

Sum is the *Latitude* required. —— 52, 30 N.

EXAMPLE IV.

Given, the *Zenith Distance* (of a Star) 16° 30′ N.
and its *Declination* —— 25, 10 S.
Reqd. the *Latitude of the Place?*

To the *Zenith Dist.* —— 16° 30 N.
Add the *Declination* —— 25, 10 S.

Sum is the *Latitude* required —— 41, 40 S.

EXAMPLE V.

Given, *a Star's Zenith Distance* —— 40° 20′ S.
and its *Declination* —— 54, 30 S.
Reqa. *the Latitude of the Place?*

From the Star's *Declination* —— 54° 30′ S.
Subtract the *Zenith Distance* —— 40, 20 S.

Remainder is the *Latitude* required. —— 14, 10 N.

CASE

CASE II.

When the observed *Object* doth not *Rise* or *Set*, and therefore has two *Meridian Altitudes* in the space of 24 Hours,

RULE.

The Observed *Object* { below / above } being on the *Meridian* the Pole, the { sum / diff. } of the *Meridian Altitude* and *Complement* of the *Declination* is required *Latitude*, of the *same Name* with the *Declination*.

EXAMPLE I.

Given, *the Sun's Merid. Alt. below the Pole* ; 9° 30′
and his Declination. —— 12, 20
Reqd. *the Latitude of the Place?*

To the *Co-Declination* —— 77° 40′ N.
Add the *Meridian Altitude* —— 9, 30

Sum is the *Latitude* required. —— 87, 10 N.

EXAMPLE II.

Given, *a Star's Merid. Alt. below the Pole* 7° 15′
its *Declination.* —— 20, 35
Reqd. *the Latitude of the Place?*

To the *Co-Declination* —— 69, 25′ S.
Add the *Meridian Altitude* —— 7, 15

Sum is the *Latitude* required. 76, 40 S.

EXAM-

EXAMPLE III.

Given, *a Star's Meridian Alt. above the Pole*, 40° 00′
and its Declination —— 55, 10
Reqd. *the Latitude of the Place?*

From the *Meridian Altitude*, —— 40° 00
Subtract the *Co-Declination* —— 34, 50 N.

Remainder is the *Latitude* required. 05, 10 N.

NOTE,

That ſince the *Refraction* of the Sun or Stars, cauſeth them to appear higher than really they are; therefore the *Refraction* anſwering to your *Obſervation*, ſhould be *Subtracted* from the *Altitude*, or *Added* to the *Zenith Diſtance* before it can be Correct.

Alſo, in obſerving the *Variation* by the *Amplitude* of the *Riſing* and *Setting* Sun; (becauſe of the *Refraction*, and the height of the *Obſerver's* Eye above the Surface of the Sea,) the *Obſervation* ſhould be made when the Sun's under *Limb* is about $\frac{2}{3}$ of his *Diameter*, or 20 *Minutes* above the *Horizon*: Or elſe reckoning the Sun's *diſtance* from the *Zenith* 90° 36′.

'Tis true, that near the *Line* this is but of ſmall conſequence, yet in high *Latitudes*, where the Sun *Riſes* and *Setts* Obliquely, the neglecting of it produces a great Error.

CHAP. XIII.

Of the Eſtimation of a Ship's way *at Sea.*

ONE of the moſt neceſſary things in the Practice of Navigation, is to be able to make a good Eſtimate of the *Ship's way* with any Wind, according to all Circumſtances; and the moſt approved Method of doing this, is by the *Log* and *Log-line*.

The *Log-line* for about 10 Fathom from the *Log* hath, or ought to have no *Knots* or *Diviſions*, becauſe ſo much ſhould be allow'd that the *Log* may be out of the Eddy of the Ships Wake, before the Glaſs be turn'd up; But then the *Knots* or *Diviſions* begin, and ought to be at leaſt 50 Foot from one another; tho' the common erroneous Practice at Sea, is to have them but at 7 *Fathoms*, or 42 *Foot* diſtance.

Now, *For as many Knots as run out in half a Minute of Time, they account ſo many Miles the Ship ſails in an Hour, and for every* 5 *odd Feet, a tenth part of a Mile more.*

Thus 4 *Knots* in half a Minute, is 4 Miles an Hour.

And 3 *Knots* 45 Feet in half a Minute, is 3, $\frac{9}{10}$ Miles an Hour.

The Ground and Reaſon of this Practice of keeping an Account of the Ship's way by the *Log*, is this.

That 5 of our *Engliſh Feet* make a *Pace*, and 1000 of ſuch *Paces* a *Mile*, and 60 of ſuch *Miles*, a *Degree*; and conſequently a *Degree* would contain 300000 *Feet*. But this is erroneous upon all Accounts; for there are both 1056 *Paces* in a *Mile*, and 72 ſuch *Miles* in a *Degree*.

And this hath been Corrected by Mr. *Norwood* in his *Sea-men's Practice*; who by moſt exactly Meaſuring the Diſtance of two Places under the ſame *Meridian*, whoſe

whoſe *Latitudes* he alſo took by moſt accurate obſervations; found that a *Degree of a Great Circle on the Earth* muſt be 367200 *Engliſh Feet*: And this hath been in a good meaſure confirm'd by the *French* Obſervations and Menſurations, who found a *Degree* to contain 365184 Feet.

Yet Mr. *Norwood* conſidering that the *Ship's way* is really more than what is found by the *Log*; as alſo knowing that 'tis better and ſafer to have the *Reckoning* to be ſomething before the Ship; and probably becauſe 'tis a Round Number, caſt away the 7200 odd *Feet*, and ſuppoſed a *Degree* to contain juſt 360000 *Feet*. Then will a *Minute of a Degree* contain 6000 ſuch *Feet*; and that is to be reckoned as the *true Sea-mile*, 60 of which make a *Degree*. And ſince 5280 *Feet* are a *Statute Mile*, there will be $68\frac{2}{11}$ ſuch *Miles* in a *Degree*; and of the *Italian Miles* of 5000 *Feet*, 72 *Miles* or 24 *Leagues* in a *Degree*.

So that after this way of accounting, the *whole Circumference of our Globe* will be 8640 *Leagues*, or 25920 *Miles*, which is 360 *Miles* leſs than the *French* make it, and yet their's is probably leſſer than the Truth, and in Fact leſs than Mr. *Norwood*'s Account.

Now to apply all this to the *Eſtimation of the Ship's way* by the *Log*: If it be conſidered that an *half minute* is the 120th part of an *Hour*; 'tis plain the diſtance between *Knot* and *Knot* in the *Log-line* muſt be alſo the 120th part of a *Minute of a Degree* of a great Circle on the Earth; or 120th part of the *true Sea-mile* or *minute*; which is before ſhewed to contain 6000 *Feet*.

And therefore the diſtance between the *Knots* muſt be 50 *Foot* (for 50 times 120, is 6000).

Becauſe as 30 *Seconds* is to 3600 *Seconds* (or an *Hour*) ſo is 50 *Feet* to 6000 *Feet*.

Wherefore as many times 50 as the Ship runs in *half a minute*, ſo many *Miles* muſt ſhe go in an *Hour*; ſuppoſing her to keep at the ſame Rate: To try which, in long Voyages, to the *Eaſt-Indies*, &c. the *Log* is heav-

ed every *Hour*; but in ſhorter Voyages every two *Hours*; tho' always the oftner 'tis done, the better.

And from hence plainly appears the groſs Error of having but 42 *Feet* or 7 *Fathom* between *Knot* and *Knot* which is the common Diviſion of the *Log-line* at Sea. Indeed being ſenſible their Diviſions are two ſhort; they leſſen their *half Minute Glaſſes* proportionably, as having that made of only 26 or 27 *Seconds*; but this is nothing but correcting one Blunder or Error by another, and ſhews plainly that the Common Sailers will not go out of their Way, tho' they are ſure they are in the wrong.

Beſides a good Judgment in eſtimating the *Ship's way*; 'tis abſolutely neceſſary before an Account of the *Ship's place* can be given, that you ſhould not omit any poſſible opportunity in obſerving the *Latitude* and *Variation*; as alſo the Tryal for the diſcovery of *Currents*, and to be well experienced in the Trim and Qualifications of the *Ship*, whereby you may be the better able to allow for *Lee-way*.

Indeed when any one of theſe Obſervations be wanting, the Reckoning may be corrected by the reſt; But if two or more be wanting, then 'twill not be eaſie to to find where the Error lies, and therefore 'twill be difficult to make any true Correction. And ſince the *Variation* is found to be ſo very Regular, certainly the careful Obſervation thereof muſt needs be of vaſt uſe to you, as well in perfecting your *Courſe*, as in *Eaſting* and *Weſting*.

But by the neglect of obſerving the *Variation*, you muſt unavoidably fall into apparent Errors, which are often laid to *Currents* where really there are none.

In caſe of *Currents*, the Method of finding where they are, which way they ſet, and their drift, or rate of driving is ſo well known that 'tis needleſs here to inſiſt upon it; only when try'd, they muſt be allowed for by the following

RULES.

RULES.

1. A *Current* ſetting directly {against / with} the Ship {leſſens / augments} her Diſtance run by ſo much as is the drift of the *Current* in the ſame time.

2. But if a *Current* thwarts the Ship's *Courſe*, it not only leſſens or augments her *Diſtance*, but gives her another *Motion* and *Courſe* compounded of that of the *Ship* and *Current*; ſo that, if not known, or allowed for, you ſoon may bring the Ship where you can't tell which way to Steer: Therefore it is very neceſſary you ſhould know how to allow for the *Currents* upon any aſſigned *Rhumb*.

And for *Lee-way*, the uſual *Allowances* that are made in keeping Account of a *Ship's way* by *Dead Reckoning* are; (as received from that experienced Artiſt, and my good Friend Mr. *John Buckler*.)

For Inſtance.

1. If the Ship be upon a Wind, and Stem North with the Wind at E. N. E. it it uſual to allow one Point for *Lee-way*; therefore in this Caſe her Courſe will be N. by W.

2. If the Wind blow ſo hard, and cauſe one *Top-ſail* to be taken in, allow two Points for *Lee-way*; and then in the Caſe above, her Courſe will be N. N. W.

3. If it blow hard, that both *Top-ſails* are taken in, and the Sea run high, allow 3 Points for *Lee-way*; then in the Caſe above her Courſe will be N. W. by N.

4. If the *Fore-ſail* be Furl'd, and She try under a *Main-ſail* and *Miſſon*, She will make her way 4 Points before the Beam; then in the Caſe above her Courſe will be N. W.

5. If

5. If She try under a *Main-ſail* only, She will make her way near 3 Points before the Beam; and then in the Caſe above, her Courſe will be N. W. by N.

6. But if She Try under a *Miſſon* only, She'll make her way about two Points before the *Beam*; then in the caſe above, her Courſe will be W. N. W.

7. If She lye a *Hull*, with all her Sails furl'd, She will make her way one Point before the Beam; and then in the Caſe above, her Courſe will be W. by N.

8. If the Wind have blown hard at E. N. E, and made a high Sea, the Ship Steming (as before) North, but the Wind ſhift to W. N. W. whilſt the Sea continues to run high, it taking the Ship on the *Lee-Bow*, abates of the *Lee-way*.

But in all theſe Caſes reſpect muſt be had to the ſmootheſt of the Water, or the Sea's running high; and then the Allowances may be rectified by ſetting the Ship's Wake by the *Compaſs* or *Quadrant*, which is uſually placed on each Rayl of the Ship's quarter for that purpoſe.

Theſe Directions with a little Practice and Conſideration of the *Ship's trim*, *Sail abroad*, *Streſs of wind*, and *growth of the Sea*, will ſo ſtrengthen our *Young Navigator*'s Judgment, (for whom this is wholly intended) that he'll ſeldom fail of making a true Allowance.

The following Table of the Sun's Declination, *was communicated to me with great Generoſity and Freedom, by That every way Excellent Mathematician and Aſtronomer*, *Mr.* John Flamſteed.

A Correct Table OF THE *Sun's Declination.*

The first Year after Leap-Year.

The Uſe of theſe Tables of the Sun's Declination.

LOOK the Year and Month on the Head of the Table, and the Day in the Left-hand Column, and in the common Angle of meeting, you have the Sun's *Declination* for that Day at Noon, under the *Meridian* of *London*.

EXAMPLE.

To find the Sun's Declination *the 27th of* Auguſt, *Anno*. 1702.

Find the Year 1702. and downwards under the Month of *Auguſt*, right againſt the 17th Day, you'll have *6 deg. 12 min. North Declination.*

But when you are to the *Weſtward* or *Eaſtward* of the *Meridian* of *London*, then the *Declination* muſt be proportion'd according to its *Diurnal Difference*, and the *Longitude* of the Place you are in from *London*; and that is eaſily done by the following Table, where you muſt obſerve this

RULE.

Weſt } *Longitude* { Decr. } add, but *Decl.* { Incr. } Subt.
Eaſt } with *Decl.* { Incr. } { Decr. }

EXAM-

EXAMPLE.

Suppose on the 18*th of* May 1703. *you would know the Sun's* Declination *at* 120 Degrees ~~Latitude~~ *East from* London.

The *Declination* in the *Meridian* of *London* for that Day, is 20 *deg.* 41 *min.* and the *Diurnal Difference* at that time is 11 *min.* Then under 120 *deg.* in the Head of the Table, and right againſt 11 *min.* you'll find 4 *min.* which being added to the 20 *deg.* 41 *min.* makes 20 *deg.* 45 *min.* the True *Declination* at Noon in that Place: But if it had been 120 Weſt *Longitude*, the *Declination* would have been but 20 *deg.* 37 *min.*

A Table to reduce the Sun's Declination to any other Meridian.

The Use of the Table of Meridional Parts.

FInd the *Degrees* of *Latitude* in the *Left-hand Column*, and the *Minutes* at the *Head of the Table*; and in the Angle of Meeting are the *Meridional Parts* for that *Latitude*.

EXAMPLE.

Suppose the Latitude *of* 26 deg. 15 min. *be given, and the* Meridional Parts *belonging to it requir'd.*

Right againſt 26 *deg.* (in the firſt *Column*) and under 15 *min.* (at the *Head of the Table*) you will find 1633; which are the *Meridional Parts* anſwering that *Latitude*.

Since this Table is Calculated but to every 5 *minutes of Latitude*; you have annex'd a Table of *Proportional Parts*; by the help of which you may *find the Meridional Parts to every Minute of Latitude*.

EPAMPLE.

To find the Meridional Parts *for the Latitude of* 16 *deg.* 29 *min.*

The next leſs than 29 *min.* is 25 *min*; wherefore, finding the *Meridional Parts* for 16 *deg.* 25 *min.* to be 999, and right againſt 16 *deg.* in the *Column of Difference*, you'll find 5. Look this *Difference* 5, in the

the firſt Column (under D) of the Table of *Proportional Parts*, and look 4 (the difference between 29 *min.* and 25 *min.*) at the *Head of the Table*; then right againſt 5, and under 4, you'll find the *Proportional Part* 4; which added to 999, makes 1003, the *Meridional Parts* for the *Latitude* 16 *d.* 29 *min.* required.

A Table of Angles, which every Point of the Compass maketh with the Meridian.

FINIS.

Mathematical and Sea-Books, Printed and Sold by Jeremiah Seller *and* Charles Price, *at the* Hermitage *Stairs at* Wapping.

FOLIO.

English Atlas, containing Sea-Charts of all the World.

English Pilot for the
- Northern Navigation.
- Southern Navigation.
- Streights.
- Coasts of *Barbary* and *Guinea*.
- *West-Indies*.
- *East-Indies*.

Coasting Pilot for *England*, *Scotland*, *France*, *Holland*, &c.

QUARTO.

Practical Navigation, or an Introduction to the whole Art.

OCTVO.

A new System of Geography, with Tables to each Map.

Anglia Contracta, containing Maps of all the Counties in *England* and *Wales*, with Tables shewing the Division of each Map.

Atlas Terrestis, containing Maps of all the Empires, Kingdoms, &c. in the whole World.

Atlas

Books Sold by Jer. Seller *and* Char. Price.

Atlas Cæleſtis, containing the Syſtems and Theories of the Planets, Conſtellations of the Stars, Maps of the Sun and Moon, and other *Phænomena's* of the Heavens.

Sea Gunnery.

An Epitome of the Art of Navigation, with a Correct Table of Logarithms, Sines Tangents and Secants.

A Geographical Deſcription of the Kingdome of *Ireland*, containing Maps of each Country.

Scripture Geography.

Elements and Principles of Geometry Demonſtrated.

A Pocket-Book containing ſeveral choice Collections in Arithmetick, Geometry, Navigation, &c.

Almanacks for any of the *Engliſh* Plantations in *America* for ever.

Hydrographia Univerſalis.

Where is alſo Made and Sold all ſorts of Mathematical Inſtruments for Sea and Land; by Wholeſale or Retail at reaſonable Rates.
